

1. Administrative & Study Identification

Full Study Title: A Multicenter, Randomized, Double-blind, Placebo-controlled, Phase II Platform Study to Assess the Efficacy and Safety of Investigational Compound(s) in Patients With Moderate to Severe Atopic Dermatitis **Short Title/Acronym:** Platform Study in Moderate to Severe Atopic Dermatitis **Protocol Number:** CADPT17A12201 **NCT Number:** NCT06947993 **EudraCT Number:** 2024-519081-49 **Sponsor Name:** Novartis Pharmaceuticals **Investigational Product:** GHZ339 (and other investigational compounds) **Phase of Development:** Phase II **Medical Monitor:** Novartis Medical Monitor

2. Study Synopsis & Rationale

2.1 Study Objective Primary Objective: To evaluate the efficacy of GHZ339 at various doses compared to placebo in reducing the severity and extent of moderate to severe atopic dermatitis (AD). **Secondary Objectives:** To evaluate the safety, tolerability, and optimal dosing of GHZ339, as well as to determine clinical response utilizing IGA scores and EASI-75 achievement.

2.2 Background & Rationale This trial is designed as a platform study to evaluate multiple compounds in participants with moderate to severe atopic dermatitis (AD). The platform framework allows for the efficient investigation of the efficacy and safety of several interventions under one master protocol. The first intervention planned to be evaluated is GHZ339, exploring optimal dosing to address the unmet medical need for effective and safe treatments in chronic AD.

3. Study Design & Methodology

3.1 Design Framework Study Type: Interventional **Control Type:** Placebo-controlled **Blinding:** Double-blind, Quadruple Masked (Participant, Care Provider, Investigator, Outcomes Assessor) **Randomization:** Randomized, Parallel Assignment

3.2 Planned Enrollment & Duration Target \$N\$: 224 evaluable patients **Number of Sites:** Multicenter (~105 locations) **Estimated Study Start:** 16-May-2025 **Estimated Primary Completion:** 27-Nov-2028 **Estimated Study Completion:** 22-Dec-2028

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria 1. Male or female patients aged ≥ 18 to 100 years. 2. Able and willing to sign the informed consent (IC). 3. Patients with a diagnosis of AD and onset of disease for at least 1 year. 4. Moderate to severe AD.

4.2 Exclusion Criteria 1. Participants with a clinically significant medical condition or infectious disease (specified in sub-protocol). 2. Participants with clinically significant abnormal hematology, clinical chemistry, or urine test results or clinically significant abnormal ECG. 3. Participant with any other active inflammatory skin disease. 4. Participants with any chronic, uncontrolled medical condition, which would put the participant at increased risk during the study (e.g., uncontrolled: diabetes, hypertension). 5. Participants with any clinically unstable disease states that would likely require systemic corticosteroids (e.g., uncontrolled asthma).

5. Intervention & Treatment Plan

5.1 Investigational Regimen Dosage/Frequency & Study Arms: Participants are randomly assigned to one of five arms: * **GHZ339 Dose A:** GHZ339 at dose A during Treatment Period 1, followed by dose A during Treatment Period 2. * **GHZ339 Dose B:** GHZ339 at dose B during Treatment Period 1, followed by dose B during Treatment Period 2. * **GHZ339 Dose C:** GHZ339 at dose C during Treatment Period 1, followed by dose C or A during Treatment Period 2. * **GHZ339 Dose D:** GHZ339 at dose D during Treatment Period 1, followed by dose D or A during Treatment Period 2. * **Placebo:** Matching placebo during Treatment Period 1, followed by GHZ339 at dose A during Treatment Period 2. **Route of Administration:** Protocol-specified route of administration for GHZ339 and Placebo. **Duration of Treatment:** 32 weeks total (Treatment Period 1: 16 weeks; Treatment Period 2: 16 weeks).

5.2 Concomitant & Prohibited Therapy Permitted: Standard allowed emollients and baseline therapies per protocol. **Prohibited:** Other concurrent investigational treatments or unauthorized systemic immune-modulating agents.

6. Study Timeline & Visit Schedule

Visit ID	Window	Key Activities/Procedures
1	2-4 weeks prior to Day 0	Screening, Informed Consent, Medical History, Baseline Labs
2	Weeks 0 to 16	Treatment Period 1: Randomization, First Dose, EASI/IGA Assessments, Safety Labs
3	Weeks 16 to 32	Treatment Period 2: Re-assignment to specified GHZ339 dose (A, B, C, D) as per arm, Efficacy/Safety tracking
4	4 weeks	End of Study/Follow-up

post-treatment | Final Vital Signs, Exit Interview, Safety check
|

7. Outcome Measures (Endpoints)

7.1 Primary Endpoint Definition: Change from baseline in the Eczema Area and Severity Index (EASI) score at Week 16.

Measurement Method: Clinical assessment using the EASI scale (0 to 72, where 72 is the worst eczema severity).

7.2 Secondary & Exploratory Endpoints * Investigator Global Assessment (IGA) response at Week 16 (defined as clear or almost clear [score 0 or 1] with at least a 2 point-reduction from baseline). * EASI-75 response (defined as achieving $\geq 75\%$ improvement in EASI score compared to baseline).

8. Safety & Adverse Event Reporting

Adverse Event (AE) Monitoring: Standard collection via regular clinical visits, patient reporting, and safety laboratory tests throughout the 36-38 week study period. **Serious Adverse Events (SAEs):** Evaluated and reported continuously (typically 24 hours). **Data Monitoring Committee (DMC):** Utilized to monitor patient safety continuously given the platform study design testing novel compounds.

9. Statistical Analysis Plan (SAP) Summary

Analysis Populations: Intent-to-Treat (ITT) for primary efficacy evaluation; Safety Set for all AEs. **Sample Size Justification:** Target enrollment of $N=224$ provides sufficient statistical power ($\alpha = 0.05$, $\text{Power} = 80\%$) to detect clinically meaningful differences in EASI scores between GHZ339 dose groups and placebo. **Handling of Missing Data:** Standard handling for AD trials (e.g., Multiple Imputation or Mixed-Effect Model for Repeated Measures).

10. Quality Assurance & Regulatory Compliance

GCP Compliance: This study will be conducted in accordance with Good Clinical Practice (GCP) and the Declaration of Helsinki.

Monitoring Plan: Regular onsite and remote monitoring of the ~ 105 participating locations to ensure protocol compliance.

Audit Trail: eCRF data entry with comprehensive audit trails and data clarification mechanisms.

11. Study Identifiers & Governance

Primary ID: CADPT17A12201 **Registry Number:** NCT06947993 **Other Identifier:** 2024-519081-49 (EudraCT Number) **Sponsor/Lead Organization:** Novartis Pharmaceuticals **Study Title:** Platform Study to Evaluate the Efficacy and Safety of Investigational Compound(s) in Patients With Moderate to Severe Atopic Dermatitis **Official Regulatory Title:** A Multicenter, Randomized, Double-blind, Placebo-controlled, Phase II Platform Study to Assess the Efficacy and Safety of Investigational Compound(s) in Patients With Moderate to Severe Atopic Dermatitis

12. Clinical Framework (Condition Specific)

Primary Condition: Moderate to Severe Atopic Dermatitis (AD) **Diagnosis Threshold:** Clinically confirmed diagnosis of AD with \$ \ge 1\$ year onset **Medical Methodology:** Targeted biologic/ investigational therapy **Optimization Target:** Significant reduction in EASI score and achievement of IGA 0/1 (Clear/Almost Clear)

13. Study Procedures & Methodology

Management Pathway: Double-blind placebo-controlled induction (16 weeks) followed by active treatment extension period (16 weeks) **Education Protocol (HCP):** Training on standardized EASI and IGA clinical scoring criteria **Education Protocol (Patient):** Guidance on recognizing and reporting AD flare-ups and AE monitoring **Quality Audit Mechanism:** Continuous monitoring of site-specific data entry and clinical grading consistency

14. Observation & Follow-Up Schedule

Total Duration: Up to 38 weeks (2-4 weeks screening + 32 weeks treatment + 4 weeks follow-up) **Onsite Visit Cadence:** Regular intervals throughout Week 16 and Week 32 assessment periods **Remote Monitoring Frequency:** Intermittent per protocol **Checklist Review Interval:** Every scheduled onsite visit
