

1. Administrative & Study Identification

Full Study Title: An Observational, Prospective, Real-world Data Registry in Chronic Obstructive Pulmonary Disease (COPD) Patients Suffering From Frequent Exacerbations (AIREIC)
Short Title/Acronym: AIREIC (A COPD Data Registry for Participants With Frequent Exacerbations)
Protocol Number: BA45495
NCT Number: NCT07059273
Sponsor Name: Hoffmann-La Roche
Investigational Product: N/A (Observational Patient Registry)
Phase of Development: N/A (Observational)
Medical Monitor: Hoffmann-La Roche Clinical Operations

2. Study Synopsis & Rationale

2.1 Study Objective * **Primary Objective:** To collect data on the disease course and treatment patterns of participants with COPD experiencing frequent exacerbations over up to 3 years. *
Secondary Objectives: To track the experience and Quality of Life (QoL) of participants and caregivers in clinical practice, and monitor changes in the standard of care, including the transition to novel treatments such as biologics.

2.2 Background & Rationale There is a clinical need for real-world evidence to better understand the longitudinal disease course and treatment patterns of COPD patients suffering from frequent exacerbations. This registry will help identify standard of care (SoC) effectiveness and track how the implementation of new therapeutic options impacts patient outcomes in routine clinical practice.

3. Study Design & Methodology

3.1 Design Framework * **Study Type:** Observational [Patient Registry] * **Control Type:** N/A (Single-arm observational cohort) * **Blinding:** Open-label / Non-blinded * **Randomization:** N/A

3.2 Planned Enrollment & Duration * **Target \$N\$:** 3,000 participants * **Number of Sites:** Global/Multicenter * **Estimated Study Start:** 18-May-2026 * **Estimated Primary Completion:** 18-Nov-2030

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria 1. Age ≥ 40 years. 2. Confirmed diagnosis of COPD for at least 12 months. 3. On stable, standard of care (SoC) COPD maintenance therapy. 4. Have experienced at least 2 exacerbations (moderate or severe) in the last 12 months, with at least one of them occurring while on SoC therapy.

4.2 Exclusion Criteria 1. Receiving palliative treatment. 2. Currently participating in any interventional drug trials.

5. Intervention & Treatment Plan

5.1 Investigational Regimen * **Dosage/Frequency:** N/A. Participants will continue to receive their standard of care (SoC) COPD maintenance therapy as prescribed by their treating physician. * **Route of Administration:** N/A (Determined by routine clinical care). * **Duration of Treatment:** Follow-up in the registry will last for up to 3 years.

5.2 Concomitant & Prohibited Therapy * **Permitted:** Standard of care maintenance therapies and any novel therapies (e.g., biologics) prescribed in routine clinical practice. * **Prohibited:** Active participation in interventional clinical trials.

6. Study Timeline & Visit Schedule

Visit ID	Window	Key Activities/Procedures
Enrollment	Day 0	Informed Consent, Demographics, Medical History, Registry Inclusion
Follow-up	Up to 3 Years	Routine medical record abstraction, assessment of exacerbations, QoL questionnaires, and tracking treatment patterns
End of Study	Year 3	Final registry data collection, completion of observational follow-up

(Note: As an observational registry, the cadence of clinical visits aligns with routine clinical practice rather than a rigid protocol-mandated schedule.)

7. Outcome Measures (Endpoints)

7.1 Primary Endpoint * **Definition:** Disease course and treatment patterns of participants enrolled in the COPD registry evaluated over a period of up to 3 years. * **Measurement Method:** Assessed through retrospective and prospective medical records to monitor changes in the standard of care and movement to novel treatments.

7.2 Secondary & Exploratory Endpoints * Quality of Life (QoL) of enrolled participants. * Experiences of participants and caregivers within standard clinical practice.

8. Safety & Adverse Event Reporting

- **Adverse Event (AE) Monitoring:** Standard real-world pharmacovigilance and AE reporting conducted per routine clinical practice and local observational registry guidelines.
- **Serious Adverse Events (SAEs):** Reported to the sponsor and regulatory authorities according to observational study requirements.
- **Data Monitoring Committee (DMC):** Registry data and general safety trends overseen internally by the sponsor (Hoffmann-La Roche).

9. Statistical Analysis Plan (SAP) Summary

- **Analysis Populations:** All enrolled participants who meet eligibility criteria and have baseline data (Registry Set).
- **Sample Size Justification:** An estimated enrollment of 3,000 participants is targeted to provide robust real-world longitudinal data on exacerbation frequencies and shifting treatment paradigms.
- **Handling of Missing Data:** Standard epidemiological imputation methods appropriate for real-world registry databases.

10. Quality Assurance & Regulatory Compliance

- **GCP Compliance:** This registry will be conducted in accordance with Good Pharmacoepidemiology Practices (GPP), Good Clinical Practice (GCP) guidelines where applicable, and the Declaration of Helsinki.
- **Monitoring Plan:** Periodic review of electronic medical records and remote data abstraction.
- **Audit Trail:** Data entered into a validated electronic data capture (EDC) registry system with standardized eCRFs and automated query generation.

11. Study Identifiers & Governance

- **Primary ID:** BA45495
 - **Registry Number:** NCT07059273
 - **Sponsor/Lead Organization:** Hoffmann-La Roche
 - **Study Title:** A COPD Data Registry for Participants With Frequent Exacerbations
 - **Official Regulatory Title:** An Observational, Prospective, Real-world Data Registry in Chronic Obstructive Pulmonary Disease (COPD) Patients Suffering From Frequent Exacerbations (AIREIC)
-

12. Clinical Framework (COPD Specific)

- **Primary Condition:** Chronic Obstructive Pulmonary Disease (COPD) with frequent exacerbations
 - **Diagnosis Threshold:** Diagnosis of COPD ≥ 12 months; ≥ 2 moderate/severe exacerbations in the past year
 - **Medical Methodology:** Routine clinical practice / Standard of Care (SoC) maintenance therapy
 - **Optimization Target:** Identifying changes in the standard of care and tracking the utilization of biologics and novel therapies
-

13. Study Procedures & Methodology

- **Management Pathway:** Real-world observational registry tracking
 - **Education Protocol (HCP):** N/A (Non-interventional; relies on standard clinical judgment)
 - **Education Protocol (Patient):** N/A (Routine standard of care)
 - **Quality Audit Mechanism:** Periodic medical record abstraction and registry data verification
-

14. Observation & Follow-Up Schedule

- **Total Duration:** Up to 3 years of follow-up per patient
 - **Onsite Visit Cadence:** Aligned with routine clinical care requirements rather than mandated study visits
 - **Remote Monitoring Frequency:** Continuous/periodic data abstraction from medical charts
 - **Checklist Review Interval:** Regular registry updates (e.g., bi-annual or annual data sweeps)
-
