

1. Administrative & Study Identification

Full Study Title: Prevalence, Clinical Characteristics, Progression, and Management of Neurofibromatosis Type 1 in Egypt
Short Title/Acronym: NF1-Egy (PRECIOUS Egypt) **Protocol Number:** D134BR00005 **NCT Number:** NCT07221331 **Sponsor Name:** AstraZeneca
Investigational Product: N/A (Observational Disease Registry)
Phase of Development: Phase Not Applicable **Medical Monitor:** AstraZeneca Clinical Study Information Center

2. Study Synopsis & Rationale

2.1 Study Objective * **Primary Objective:** To understand the natural history of the disorder in Egypt over the past 14 years in real-world settings, determine treatment patterns, and explore clinical and nonclinical factors influencing targeted outcomes for patients with Neurofibromatosis type 1 (NF1). * **Secondary Objectives:** To collect demographic data, describe clinical characteristics, assess disease progression (especially regarding plexiform neurofibromas [PNs]), and evaluate management approaches for both pediatric and adult patients.

2.2 Background & Rationale NF1 is a genetic disorder resulting from NF1 gene mutations. Its clinical expression is unpredictable, age-related, and varies among patients. As a tumor predisposition disorder, it is associated with neoplastic complications that impair health-related quality of life (QoL). NF1 prevalence and patients' clinical characteristics are not well recognized in Egypt. Furthermore, full surgical resection of PNs is often challenging due to its invasive nature, location, and size. This disease registry aims to gather essential data to understand the burden of the disease and treatment pathways.

3. Study Design & Methodology

3.1 Design Framework * **Study Type:** Observational (Retrospective Disease Registry) * **Control Type:** Single-arm (Observational Cohort) * **Blinding:** Open-label (N/A for registry) * **Randomization:** N/A

3.2 Planned Enrollment & Duration * **Target \$\$\$:** 200 participants * **Number of Sites:** Multicenter (Egypt) * **Estimated Study Start:** 19-Nov-2025 (Actual) * **Estimated Primary Completion:** 30-Sep-2026

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria 1. Male or female patients of any age at index date (first diagnosis of NF1 and/or PN). 2. Have been diagnosed with NF1 according to the NIH Consensus Development Conference diagnostic criteria or the revised criteria between 01-Jan-2010 and 31-December-2023.

4.2 Exclusion Criteria 1. Missing NF1 diagnosis data in their medical record.

5. Intervention & Treatment Plan

5.1 Investigational Regimen * **Dosage/Frequency:** N/A. (This is an observational study extracting real-world data from patient medical records). * **Route of Administration:** N/A. * **Duration of Treatment:** N/A (Retrospective observation period spanning from 2010 to 2023).

5.2 Concomitant & Prohibited Therapy * **Permitted:** Standard of care therapies administered in real-world clinical settings, including surgical resections for PNs. * **Prohibited:** N/A.

6. Study Timeline & Visit Schedule

Visit ID	Window (Days)	Key Activities/Procedures
1	01-Jan-2010 to 31-Dec-2023	Data Extraction N/A Retrospective review and extraction of clinical, diagnostic, and phenotypic data spanning 01-Jan-2010 to 31-Dec-2023.
2	31-Dec-2023 to 31-Dec-2023	End of Study N/A Final data aggregation, descriptive analysis of progression, and management evaluations.

(Note: As a retrospective observational study, there are no prospective patient visits)

7. Outcome Measures (Endpoints)

7.1 Primary Endpoint * **Definition:** Identification of real-world treatment patterns and the clinical/nonclinical factors influencing targeted outcomes in patients with NF1 (with or without PNs). * **Measurement Method:** Retrospective analysis and data mining of medical records.

7.2 Secondary & Exploratory Endpoints * Prevalence of phenotypic variabilities (e.g., cafe-au-lait macules, freckling, Lisch nodules, cutaneous neurofibromas, optic pathway gliomas, and osseous lesions). * Assessments of neoplastic complications and the burden of the disease on patients' health-related quality of life (QoL).

8. Safety & Adverse Event Reporting

- **Adverse Event (AE) Monitoring:** Standard pharmacovigilance reporting for any AEs retrospectively identified that fall under sponsor tracking requirements.
 - **Serious Adverse Events (SAEs):** N/A (Retrospective data extraction).
 - **Data Monitoring Committee (DMC):** Managed by AstraZeneca internal oversight.
-

9. Statistical Analysis Plan (SAP) Summary

- **Analysis Populations:** All eligible pediatric and adult patients with a confirmed diagnosis of NF1 and valid medical records between 2010 and 2023.
 - **Sample Size Justification:** Estimated $N = 200$ based on historical patient volume and data availability across participating Egyptian centers.
 - **Handling of Missing Data:** Patients with missing NF1 diagnosis data are strictly excluded from the study.
-

10. Quality Assurance & Regulatory Compliance

- **GCP Compliance:** Conducted in accordance with Good Clinical Practice (GCP) guidelines for observational research, as well as local Egyptian regulatory requirements and the Declaration of Helsinki.
 - **Monitoring Plan:** Data verification mechanisms to assure fidelity in retrospective chart extraction.
 - **Audit Trail:** Standardized Electronic Case Report Form (eCRF) utilization with full audit tracking.
-

11. Study Identifiers & Governance

- **Primary ID:** D134BR00005
 - **Registry Number:** NCT07221331
 - **Sponsor/Lead Organization:** AstraZeneca
 - **Study Title:** NF1-Egy (PRECIOUS Egypt)
 - **Official Regulatory Title:** Prevalence, Clinical Characteristics, Progression, and Management of Neurofibromatosis Type 1 in Egypt (NF1-Egy)
-

12. Clinical Framework (Neurofibromatosis Type 1 Specific)

- **Primary Condition:** Neurofibromatosis Type 1 (NF1)
- **Diagnosis Threshold:** NIH Consensus Development Conference diagnostic criteria or revised criteria

- **Medical Methodology:** Real-world Standard of Care (including observation, medical management, and surgical resection for PNs)
 - **Optimization Target:** Disease progression monitoring and Health-related Quality of Life (QoL) burden evaluation
-

13. Study Procedures & Methodology

- **Management Pathway:** Retrospective chart review / Disease Registry
 - **Education Protocol (HCP):** N/A (Observational)
 - **Education Protocol (Patient):** N/A (Observational)
 - **Quality Audit Mechanism:** Data extraction verification and missing data exclusion checks
-

14. Observation & Follow-Up Schedule

- **Total Duration:** Retrospective extraction covering a 14-year timeframe (01-Jan-2010 to 31-Dec-2023)
 - **Onsite Visit Cadence:** N/A (Retrospective)
 - **Remote Monitoring Frequency:** N/A (Retrospective)
 - **Checklist Review Interval:** N/A (Retrospective)
-
