

1. Administrative & Study Identification

Full Study Title: A Retrospective Assessment of Accelerated Guideline-Directed Medical Therapy for Heart Failure
Short Title/Acronym: Accelerated GDMT HF Retrospective Study
Protocol Number: CLCZ696BUS36
NCT Number: NCT07217106
Sponsor Name: Novartis Pharmaceuticals
Investigational Product: Guideline-Directed Medical Therapy (GDMT) Management
Phase of Development: N/A for Observational / Retrospective Assessment
Medical Monitor: Novartis Clinical Operations Lead

2. Study Synopsis & Rationale

2.1 Study Objective Primary Objective: To evaluate the efficacy and safety of a specialized Guideline-Directed Medical Therapy (GDMT) clinic for the treatment of heart failure compared to standard usual care. **Secondary Objectives:** To assess improvements in quality of life, analyze long-term health outcomes, and identify treatment methods that lead to superior clinical responses to guide future medical practices and policies.

2.2 Background & Rationale Heart failure is a condition in which the heart does not pump blood as well as it should. Finding the best treatment approach can significantly improve patients' quality of life and health outcomes. This study analyzes medical data retrospectively to compare two groups of already-treated patients: those referred to a specialized GDMT clinic and those receiving standard medical care. This observational approach helps determine if accelerated, specialized adherence to guidelines offers better results than usual care.

3. Study Design & Methodology

3.1 Design Framework Study Type: Observational, Retrospective Cohort Study **Control Type:** Active Comparator (Standard / Usual Care) **Blinding:** Open-label (Retrospective analysis)
Randomization: N/A (Retrospective assignment based on real-world clinical paths)

3.2 Planned Enrollment & Duration Target \$N\$: [Determined by available historical records] **Number of Sites:** 1 (Massachusetts General Hospital) **Estimated Study Start:** Retrospective data extraction **Estimated Primary Completion:** Jan-2026

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria 1. Confirmed diagnosis of Heart Failure. 2. Patients who received medical treatment for heart failure at Massachusetts General Hospital. 3. Patients with available medical histories documenting either referral to the specialized GDMT clinic or receipt of standard usual care.

4.2 Exclusion Criteria 1. Insufficient or incomplete medical records for long-term outcome assessment. 2. Concurrent participation in an interventional clinical trial that would confound standard care or GDMT tracking.

5. Intervention & Treatment Plan

5.1 Investigational Regimen Dosage/Frequency: Dosing schedules and titration algorithms as per real-world Guideline-Directed Medical Therapy (GDMT) for heart failure vs. standard care prescriptions. **Route of Administration:** Oral, IV, etc., as documented in patient historical charts. **Duration of Treatment:** Evaluated across the respective retrospective observation period.

5.2 Concomitant & Prohibited Therapy Permitted: Standard concomitant therapies per patient history. **Prohibited:** N/A (Observational study; no new treatments or interventions are introduced).

6. Study Timeline & Visit Schedule

(Note: As a retrospective study, standard forward-looking visit windows are replaced with historical data extraction points) |
Visit ID | Window (Days) | Key Activities/Procedures | | :---
| :--- | :--- | | **Screening** | N/A | Retrospective chart review and cohort identification | | **Baseline** | Day 0 | Date of initial GDMT clinic referral or matched standard care encounter | | **Interim** | N/A | Retrospective extraction of safety, efficacy, and clinical milestones | | **End of Study** | N/A | End of retrospective observation window / Last recorded follow-up |

7. Outcome Measures (Endpoints)

7.1 Primary Endpoint Definition: Efficacy and safety outcomes of patients attending the specialized GDMT clinic compared to those receiving standard care. **Measurement Method:** Retrospective analysis of electronic health records (EHR).

7.2 Secondary & Exploratory Endpoints Changes in patient quality of life parameters and health outcome metrics. Hospitalization rates and cardiovascular event occurrences.

8. Safety & Adverse Event Reporting

Adverse Event (AE) Monitoring: Retrospective extraction of safety events and treatment tolerability from medical records. **Serious Adverse Events (SAEs):** Evaluated from historical hospitalization and Emergency Room visit data. **Data Monitoring Committee (DMC):** N/A for retrospective observational records review.

9. Statistical Analysis Plan (SAP) Summary

Analysis Populations: Retrospective observation cohorts (GDMT clinic group vs. Usual Care group). **Sample Size Justification:** Convenience sample based on the availability of eligible historical patient records at Massachusetts General Hospital. **Handling of Missing Data:** Exclusion of largely incomplete records or utilization of multiple imputation techniques depending on the specific variables evaluated.

10. Quality Assurance & Regulatory Compliance

GCP Compliance: This study is conducted in accordance with Good Clinical Practice (GCP) principles for observational research and applicable data privacy regulations (e.g., HIPAA). **Monitoring Plan:** Internal data validation and auditing of electronic health record (EHR) extraction. **Audit Trail:** Secured, anonymized database queries and structured data extraction forms.

11. Study Identifiers & Governance

Primary ID: CLCZ696BUS36 **Registry Number:** NCT07217106 **Sponsor/Lead Organization:** Novartis Pharmaceuticals **Study Title:** Accelerated GDMT HF Retrospective Study **Official Regulatory Title:** A Retrospective Assessment of Accelerated Guideline-Directed Medical Therapy for Heart Failure

12. Clinical Framework (Heart Failure Specific)

Primary Condition: Heart Failure **Diagnosis Threshold:** Confirmed clinical diagnosis of HF **Medical Methodology:** Guideline-Directed Medical Therapy (GDMT) vs Usual Care **Optimization Target:** Implementation and up-titration of GDMT

13. Study Procedures & Methodology

Management Pathway: Referral to specialized GDMT clinic vs. standard clinical pathway **Education Protocol (HCP):** N/A (Retrospective observation) **Education Protocol (Patient):** N/A (Retrospective observation) **Quality Audit Mechanism:** Retrospective chart and database review

14. Observation & Follow-Up Schedule

Total Duration: Dependent on the retrospective historical timeframe **Onsite Visit Cadence:** N/A (Historical data) **Remote Monitoring Frequency:** N/A **Checklist Review Interval:** N/A
