

1. Administrative & Study Identification

Full Study Title: A PHASE 2, OPEN-LABEL EXTENSION STUDY TO INVESTIGATE THE SAFETY AND EFFICACY OF PF-07868489 ADMINISTERED TO ADULT PARTICIPANTS WITH PULMONARY ARTERIAL HYPERTENSION **Short Title/Acronym:** A Study to Learn About the Study Medicine (Called PF-07868489) in People With Pulmonary Arterial Hypertension Who Have Previously Participated in a Clinical Study **Protocol Number:** C5001004 **NCT Number:** NCT07073820 **Sponsor Name:** Pfizer **Investigational Product:** PF-07868489 **Phase of Development:** Phase 2 **Medical Monitor:** Pfizer CT.gov Call Center / Clinical Operations Lead

2. Study Synopsis & Rationale

2.1 Study Objective Primary Objective: To evaluate the long-term safety, tolerability, and effects of the study medicine (PF-07868489) in adult participants with Pulmonary Arterial Hypertension (PAH). **Secondary Objectives:** To monitor the long-term pharmacokinetics (how the drug moves through the body) and the development of anti-drug antibodies over an extended period.

2.2 Background & Rationale This is an open-label extension study designed to evaluate the long-term effects and safety of PF-07868489 in participants who completed a previous qualifying clinical trial (such as NCT06137742). Because PAH is a progressive, serious condition characterized by high blood pressure in the arteries that carry blood to the lungs, understanding the long-term clinical benefits, safety profile, and tolerability of this investigational biologic over an extended timeframe (up to 111 weeks) is a medical necessity.

3. Study Design & Methodology

3.1 Design Framework Study Type: Interventional (Extension Study) **Control Type:** Single-arm **Blinding:** Open-label **Randomization:** N/A

3.2 Planned Enrollment & Duration Target \$N\$: 36 participants **Number of Sites:** Approximately 39 locations **Estimated Study Start:** 10-Nov-2025 **Estimated Primary Completion:** 18-Jul-2028

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria 1. Aged \$ge 18\$ years or older at the screening of the previous qualifying study. 2. Completed the

required treatment duration with PF-07868489 and other assessments at the end of that qualifying study. 3. Willing and able to abide by all scheduled visits, treatment plans, laboratory tests, lifestyle considerations, and other study procedures.

4.2 Exclusion Criteria 1. Experienced worsening PAH or required hospitalization for worsening PAH during the qualifying study. 2. Currently on placement for a surgery to replace any tissue or part of the body (transplant). 3. Have a planned surgery for PAH.

5. Intervention & Treatment Plan

5.1 Investigational Regimen Dosage/Frequency: Administered every 4 weeks. **Route of Administration:** Subcutaneous (SC) injection. **Duration of Treatment:** Up to week 111 (just over 2 years).

5.2 Concomitant & Prohibited Therapy Permitted: Stable doses of current PAH background medications. **Prohibited:** Other concurrent investigational agents or therapies conflicting with the study protocol.

6. Study Timeline & Visit Schedule

Visit ID	Window (Days)	Key Activities/Procedures
Screening	Prior to Day 0	Informed Consent, verification of qualifying study completion, Medical History
Baseline	Day 0	First extension dose, Vital Signs, ECG, Safety Labs
Interim	Every 4 Weeks	SC Injection of PF-07868489, Safety Labs, Efficacy Assessment (NT-proBNP)
End of Study	Week 111	Final Vital Signs, Exit Clinical Evaluations, IP Accountability

7. Outcome Measures (Endpoints)

7.1 Primary Endpoint Definition: Long-term safety profile (incidence of adverse events, vital sign abnormalities, laboratory tests, and ECG parameters) and changes in N-Terminal Prohormone Brain Natriuretic Peptide (NT-proBNP) levels from baseline. **Measurement Method:** Clinical observation, ECG, and Central Laboratory Analysis.

7.2 Secondary & Exploratory Endpoints * Pharmacokinetics (PK) parameters over the extended treatment period. * Development and incidence of anti-drug antibodies (ADAs).

8. Safety & Adverse Event Reporting

Adverse Event (AE) Monitoring: Standard collection via regular onsite investigator assessments every 4 weeks during dosing visits. **Serious Adverse Events (SAEs):** Routine reporting timeline (typically 24 hours) as per sponsor guidelines. **Data Monitoring Committee (DMC):** Internal safety monitoring mechanisms managed by Pfizer.

9. Statistical Analysis Plan (SAP) Summary

Analysis Populations: Safety Set (all participants receiving at least one dose in the extension study). **Sample Size Justification:** Target enrollment of $N=36$ is based on the eligible rollover participant pool from the preceding Phase 1/2 qualifying study. **Handling of Missing Data:** Standard approaches for open-label extensions, such as Mixed-Effects Model for Repeated Measures (MMRM) for longitudinal data or Last Observation Carried Forward (LOCF).

10. Quality Assurance & Regulatory Compliance

GCP Compliance: This study will be conducted in accordance with Good Clinical Practice (GCP) and the Declaration of Helsinki. **Monitoring Plan:** Regular onsite monitoring visits to ensure subject safety and protocol adherence. **Audit Trail:** Data entered into eCRFs with rigorous data clarification and sponsor auditing processes.

11. Study Identifiers & Governance

Primary ID: C5001004 **Registry Number:** NCT07073820 **Sponsor/Lead Organization:** Pfizer **Study Title:** A Study to Learn About the Study Medicine (Called PF-07868489) in People With Pulmonary Arterial Hypertension Who Have Previously Participated in a Clinical Study With PF-07868489 **Official Regulatory Title:** A PHASE 2, OPEN-LABEL EXTENSION STUDY TO INVESTIGATE THE SAFETY AND EFFICACY OF PF-07868489 ADMINISTERED TO ADULT PARTICIPANTS WITH PULMONARY ARTERIAL HYPERTENSION

12. Clinical Framework (Adapted for PAH Specifics)

Primary Condition: Pulmonary Arterial Hypertension (PAH) **Diagnosis Threshold:** Confirmed PAH diagnosis matching inclusion criteria of the preceding qualifying study **Medical Methodology:** Investigational biologic combined with stable background PAH medical therapy **Optimization Target:** Improvement/Maintenance of cardiac function, marked by NT-proBNP level changes

13. Study Procedures & Methodology

Management Pathway: Open-label extension pathway for continuous PAH therapy **Education Protocol (HCP):** Investigator training on subcutaneous administration and safety monitoring **Education Protocol (Patient):** Protocol orientation and lifestyle considerations **Quality Audit Mechanism:** Ongoing safety surveillance and PK/PD tracking

14. Observation & Follow-Up Schedule

Total Duration: Up to 111 follow-up weeks **Onsite Visit Cadence:** Every 4 weeks (Q4W) **Remote Monitoring Frequency:** N/A (Standard interval reporting) **Checklist Review Interval:** Every 4 weeks during dosing visits

15. Sign-off & Approval
