

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 02-Apr-2026

1. Administrative & Study Identification

Full Study Title: A Worldwide Cancer Registry Enrolling Participants Profiled With a Next-Generation Sequencing Test
Short Title/Acronym: WAYFIND-R **Protocol Number:** MX39897 **NCT Number:** NCT04529122 **Sponsor Name:** Hoffmann-La Roche (F. Hoffmann-La Roche Ltd) **Investigational Product:** N/A (Observational / Registry. Focused on Real-World Data for Next-Generation Sequencing [NGS] guided targeted therapies) **Phase of Development:** Observational (N/A for Phase) **Medical Monitor:** Hoffmann-La Roche
Study Contact

2. Study Synopsis & Rationale

2.1 Study Objective Primary Objective: To capture high-quality real-world data linking next-generation sequencing, treatments, and outcomes from cancer patients diagnosed with a solid tumor. This includes providing a platform to support clinical/epidemiological research, developing an evidence-generation platform to understand health outcomes, and characterizing the clinical course of solid tumor cancers following NGS testing.
Secondary Objectives: To inform best practice for NGS-based treatment decisions, understand disparities in patients' access to advanced diagnostics/therapies, establish external comparator cohorts for single-arm clinical trials, and accelerate drug development in rare cancers.

2.2 Background & Rationale Precision oncology has transformed cancer care, but evidence gaps remain between clinical trial efficacy and outcomes in routine practice. Real-world data (RWD) are essential to bridge this gap, particularly clinicogenomic data that link molecular testing with treatment decisions and patient outcomes. WAYFIND-R connects clinical practice and research with meaningful insights from RWD to advance the global understanding of precision oncology across diverse, real-world populations.

3. Study Design & Methodology

3.1 Design Framework Study Type: Observational, Prospective Registry **Control Type:** N/A (Single-arm, cohort study) **Blinding:** Open-label / N/A **Randomization:** N/A

3.2 Planned Enrollment & Duration Target **SN\$:** ~15,000 patients
Number of Sites: Global/Worldwide (Including sites in Brazil,

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria 1. Participant is an adult (according to the age of majority as defined by local regulations). 2. Participant is currently diagnosed with any type of solid tumor cancer, at any stage of the disease, at the enrollment date. 3. Participant has undergone NGS testing, no longer than 3 months prior to the enrollment date, irrespective of the availability of test results. 4. Informed consent has been obtained from the participant or legally authorized representative, as per local regulations.

4.2 Exclusion Criteria 1. Participant has a prior or current diagnosis of haematological malignancy.

5. Intervention & Treatment Plan

5.1 Investigational Regimen Dosage/Frequency: N/A - Treatment is administered according to standard of care and routine clinical practice as driven by NGS test results/Molecular Tumor Boards. **Route of Administration:** N/A (Varies based on routine clinical care) **Duration of Treatment:** N/A (Registry tracks treatment courses longitudinally)

5.2 Concomitant & Prohibited Therapy Permitted: Standard concomitant medications and therapies for cancer and related comorbidities as prescribed by the HCP. **Prohibited:** N/A (Observational study capturing real-world practices).

6. Study Timeline & Visit Schedule

Visit ID	Window (Days)	Key Activities/Procedures
1	Screening/Baseline	Day 0 Informed Consent, Demographics, Tumor Characteristics, Comorbidities, Biomarker Data, NGS Test Results
2	Follow-up	Every 6 months Longitudinal data collection: Molecular tumor board decisions, cancer treatments, safety data, and outcomes
3	End of Study	Up to 5 Years Final Overall Survival tracking, clinical course summary

7. Outcome Measures (Endpoints)

7.1 Primary Endpoint Definition: Overall Survival (from the date of registry entry until death, for up to 5 years) and the comprehensive capture of real-world data linking NGS to patient

outcomes. **Measurement Method:** Registry tracking of vital status, clinical course, and treatment effectiveness in a centralized database mapped to the OMOP common data model.

7.2 Secondary & Exploratory Endpoints * Patient-relevant safety data and health outcomes corresponding to specific molecularly-guided therapies. * Socioeconomic factors influencing patient care pathways and disparities in access to advanced diagnostics.

8. Safety & Adverse Event Reporting

Adverse Event (AE) Monitoring: Patient-relevant safety data are collected prospectively every ≥ 6 months from standard electronic health records. **Serious Adverse Events (SAEs):** Collected per standard registry protocols for observational real-world data studies. **Data Monitoring Committee (DMC):** An Independent Data Access Committee reviews applications from researchers to access data, ensuring privacy and compliance.

9. Statistical Analysis Plan (SAP) Summary

Analysis Populations: All enrolled patients with solid tumors who have baseline data and valid NGS results logged. **Sample Size Justification:** A target of 15,000 patients allows for the creation of patient cohorts large enough to robustly analyze rare, molecularly defined cancer subtypes. **Handling of Missing Data:** Standardized real-world data collection processes are deployed to minimize missing data. Analyses rely on anonymized individual participant data within a secure data science workbench.

10. Quality Assurance & Regulatory Compliance

GCP Compliance: This study will be conducted in accordance with Good Clinical Practice (GCP), observational research guidelines, and the Declaration of Helsinki. **Monitoring Plan:** Data collection occurs longitudinally. The WAYFIND-R methodological and operational aspects were guided by external experts and the European Medicines Agency (EMA). **Audit Trail:** Patient data are anonymized and mapped to the OMOP (Observational Medical Outcomes Partnership) common data model with rigorous cycles of data quality controls.

11. Study Identifiers & Governance

Primary ID: {{MX39897}} **Registry Number:** {{NCT04529122}} **Sponsor/Lead Organization:** {{Hoffmann-La Roche}} **Study Title:** {{WAYFIND-R}} **Official Regulatory Title:** {{A Worldwide Cancer Registry

12. Clinical Framework (Precision Oncology Specific)

Primary Condition: {{Solid Tumors}} **Diagnosis Threshold:** {{Next-Generation Sequencing (NGS) profiling \$\le\$ 3\$ months prior to enrollment}} **Medical Methodology:** {{Precision Oncology / Molecular Tumor Board driven standard of care}} **Optimization Target:** {{NGS-based targeted treatment decisions}}

13. Study Procedures & Methodology

Management Pathway: {{Routine clinical practice / Real-World Data collection}} **Education Protocol (HCP):** {{N/A - Observational Registry}} **Education Protocol (Patient):** {{N/A - Observational Registry}} **Quality Audit Mechanism:** {{Mapping to OMOP common data model with continuous data quality controls}}

14. Observation & Follow-Up Schedule

Total Duration: {{Up to 5 years follow-up}} **Onsite Visit Cadence:** {{Per routine clinical care}} **Remote Monitoring Frequency:** {{Prospective data collection every \$\ge\$ 6\$ months}} **Checklist Review Interval:** {{Independent Data Access Committee reviews for secondary research}}
