

1. Administrative & Study Identification

Full Study Title: Observational Study of Muscle Invasive Urothelial Carcinoma Participants Treated With Adjuvant Nivolumab in France **Short Title/Acronym:** URADJ / CA209-1416 **Protocol Number:** CA209-1416 **NCT Number:** NCT06421311 **Posting ID:** 926594301606011634 **Sponsor Name:** Bristol Myers Squibb **Investigational Product:** Nivolumab **Phase of Development:** Not Applicable **Medical Monitor:** Bristol Myers Squibb Clinical Operations

2. Study Synopsis & Rationale

2.1 Study Objective Primary Objective: To estimate the real-world effectiveness of adjuvant nivolumab therapy in adult participants with muscle invasive urothelial carcinoma (MIUC) in France. **Secondary Objectives:** To assess the safety profile, tolerability, and overall survival (OS) outcomes associated with adjuvant nivolumab therapy in a real-world clinical setting.

2.2 Background & Rationale To address the gap in real-world evidence for patients with muscle invasive urothelial carcinoma (MIUC). While randomized clinical trials have established the efficacy of adjuvant nivolumab for patients with high-risk MIUC following radical resection, real-world data from France is required to confirm these outcomes in everyday clinical practice and diverse patient populations outside of controlled trial environments.

3. Study Design & Methodology

3.1 Design Framework Study Type: Observational (Ambispective) **Control Type:** Single-arm **Blinding:** Open-label / Non-blinded **Randomization:** N/A

3.2 Planned Enrollment & Duration Target \$N\$: 176 participants **Number of Sites:** Multiple sites across France **Estimated Study Start:** May 2024 **Study Status:** TERMINATED (Study was terminated early)

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria 1. Participants with pathological evidence of muscle invasive urothelial carcinoma (originating in bladder, ureter, or renal pelvis) at high risk of recurrence after radical

resection with programmed death-ligand 1 (PD-L1) tumour cell expression \$\\ge 1\\%\$: - Who received neoadjuvant chemotherapy OR - Who did not receive neoadjuvant chemotherapy and who are not eligible or refusing adjuvant cisplatin chemotherapy 2. At least 18 years of age at the time of treatment decision. 3. Decision to treat with adjuvant nivolumab therapy has already been taken. 4. Participants who provide oral informed consent to participate in the study (or who express non-opposition to data collection during their lifetime for deceased patients enrolled retrospectively).

4.2 Exclusion Criteria 1. Participants with a current primary diagnosis of a cancer other than muscle invasive urothelial carcinoma within the past 5 years, ie, a cancer other than urothelial carcinoma that requires systemic or other treatment or has not been treated curatively (as per discretion of the investigator). 2. Participants currently enrolled in an interventional clinical trial for their urothelial carcinoma. Patients who have completed their participation in an interventional trial or who are not receiving study drug anymore and who are only followed-up for overall survival (OS) can be enrolled. Patients enrolled in a clinical trial not evaluating an investigational drug can be enrolled (e.g. trial investigating novel imaging modalities). 3. Pregnant women. 4. Participants under guardianship.

5. Intervention & Treatment Plan

5.1 Investigational Regimen Dosage/Frequency: Standard-of-care dosing for adjuvant Nivolumab. **Route of Administration:** Intravenous (IV). **Duration of Treatment:** Up to standard duration (e.g., 1 year) or until disease recurrence, unacceptable toxicity, or study termination.

5.2 Concomitant & Prohibited Therapy Permitted: Standard concomitant medications and supportive care for co-morbidities as prescribed by the treating physician in routine practice. **Prohibited:** Concurrent administration of other investigational anti-cancer therapies in interventional clinical trials.

6. Study Timeline & Visit Schedule

(Note: As an observational study, visits align with routine clinical practice rather than a strict protocol-mandated schedule) | Visit ID | Window (Days) | Key Activities/Procedures | | :--- | :--- | :--- | | **Screening** | Variable | Oral Informed Consent, Medical History Abstraction, Eligibility Confirmation | | **Baseline** | Day 0 | Treatment Decision Confirmation, Index Date for Nivolumab Therapy | | **Interim** | Routine Care | Real-World Data Collection: Effectiveness Assessments, Safety/AE Abstraction

7. Outcome Measures (Endpoints)

7.1 Primary Endpoint Definition: 1. Disease-free survival (DFS) of participants. **Measurement Method:** Retrospective and prospective abstraction of clinical data from patient medical records.

7.2 Secondary & Exploratory Endpoints * 1. Time to recurrence (TRR) * 2. Distance metastases-free survival (DMFS) * 3. Non-urothelial tract recurrence free survival (NUTRFS) * Real-world Overall Survival (OS). * Incidence and severity of real-world Adverse Events (AEs) and treatment modifications.

8. Safety & Adverse Event Reporting

Adverse Event (AE) Monitoring: Data collected retrospectively and prospectively from routine clinical practice medical records.

Serious Adverse Events (SAEs): Standard pharmacovigilance reporting per French local regulations and Bristol Myers Squibb guidelines. **Data Monitoring Committee (DMC):** Internal non-interventional study oversight team managed by the sponsor.

9. Statistical Analysis Plan (SAP) Summary

Analysis Populations: Real-World Effectiveness Set (all eligible patients who received at least one dose of adjuvant nivolumab and contributed data). **Sample Size Justification:** Target \$N = 176\$. Powered to describe real-world effectiveness and safety outcomes with adequate precision. **Handling of Missing Data:** Standard handling for observational real-world data, utilizing imputation or missing-indicator methods where statistically appropriate.

10. Quality Assurance & Regulatory Compliance

GCP Compliance: This study will be conducted in accordance with Good Epidemiological Practice (GEP) and applicable French data privacy and health regulations. **Monitoring Plan:** Periodic risk-based source data verification of abstracted medical records.

Audit Trail: Validated Electronic Data Capture (eDC) system with full audit trail capabilities for retrospective and prospective data entry.

11. Study Identifiers & Governance

Primary ID: CA209-1416 **Registry Number:** NCT06421311 **Posting ID:** 926594301606011634 **Sponsor/Lead Organization:** Bristol Myers Squibb **Study Title:** URADJ **Official Regulatory Title:** Ambispective Observational Study of Muscle Invasive Urothelial Carcinoma Patients Treated With Adjuvant Nivolumab in France

12. Clinical Framework (MIUC Specific)

Primary Condition: Urothelial Carcinoma (Muscle Invasive Urothelial Carcinoma - MIUC) **Diagnosis Threshold:** Pathological evidence of MIUC after radical resection with PD-L1 expression $\geq 1\%$ **Medical Methodology:** Adjuvant Immunotherapy **Optimization Target:** Real-world recurrence prevention and tolerability

13. Study Procedures & Methodology

Management Pathway: Standard clinical pathway for adjuvant treatment of MIUC in France **Education Protocol (HCP):** Standard prescribing guidelines for Nivolumab **Education Protocol (Patient):** Routine standard of care counseling for immunotherapy **Quality Audit Mechanism:** Data verification against primary electronic health records

14. Observation & Follow-Up Schedule

Total Duration: Variable (Observational follow-up until study termination) **Onsite Visit Cadence:** As per routine clinical practice **Remote Monitoring Frequency:** Periodic medical record abstraction **Checklist Review Interval:** Routine eCRF review and source data verification checks
