

1. Administrative & Study Identification

Full Study Title: A Real-World Study to Gain Clinical Insights Into Faricimab (FaReal Study) **Official Regulatory Title:** Real-World, Long-Term Data Collection to Gain Clinical Insights Into Faricimab (FaReal Study) **Short Title/Acronym:** FaReal Study **Protocol Number:** MR45586 **NCT Number:** NCT06680817 **Posting ID:** 934725100705205240 **Trial Status:** RECRUITING **Sponsor/Company:** Hoffmann-La Roche (Roche) **Investigational Product:** Faricimab (VABYSMO®) **Preferred UMLS Name:** Faricimab **ATC Code:** S01LA09 **EMA URL:** [Vabysmo EPAR Product Information](#) **Phase of Development:** Not Applicable (Observational/Real-World) **Medical Monitor:** Hoffmann-La Roche Clinical Operations Lead

2. Study Synopsis & Rationale

2.1 Study Objective Primary Objective: To evaluate the effectiveness, safety, clinical insights, and treatment patterns in patients treated with faricimab for neovascular age-related macular degeneration (nAMD) or diabetic macular edema (DME) in at least one eye, in real-world routine clinical practice over a 2-year patient follow-up period. **Secondary Objectives:** To describe and evaluate health economic aspects of previous anti-VEGF treatments compared to current treatment with faricimab.

2.2 Background & Rationale To address the need for real-world evidence on the long-term effectiveness and economic impact of faricimab in clinical practice. While clinical trials demonstrate efficacy, the FaReal study aims to understand how faricimab's potential for extended treatment intervals (targeting VEGF-A and Ang-2) translates into routine care, specifically regarding treatment burden reduction and maintenance of Visual Acuity (VA) and Central Subfield Thickness (CST).

3. Study Design & Methodology

3.1 Design Framework Study Type: Observational / Real-World **Control Type:** Single-arm (Real-world patient cohort) **Blinding:** Open-label **Randomization:** N/A

3.2 Planned Enrollment & Duration Target \$N\$: 850 patients **Number of Sites:** Multicenter (Europe/Rest of World, including Austria, Bulgaria, etc.) **Estimated Study Start:** 2024 **Estimated Primary Completion:** November 2025

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria 1. Patients receiving faricimab according to the local faricimab product label and who have initiated treatment with faricimab at the time of the ICF signature date or no more than 3 months prior to the ICF signature date, in diabetic macular edema (DME) or neovascular age-related macular degeneration (nAMD) in at least one eye. 2. Patients have received at least one faricimab treatment (the first dose) in the study eye. 3. Patients should have available data for visual acuity (VA) and Central Subfield Thickness (CST) for the Baseline level (i.e. examinations to be performed at the index date or within 4 months prior to it).

4.2 Exclusion Criteria 1. Patient participation in any investigational ophthalmology clinical trial that includes receipt of any ophthalmological investigational drug or procedure within the last 28 days prior to the ICF signature date. 2. Concomitant participation in any interventional clinical study. 3. Active ocular inflammation and/or suspected/active ocular infection in either eye. 4. Patients treated with faricimab who have and are currently participating in patient support programs (PSP) that are Market Research and Patient Support Programs (MAP) including Post Trial Access Programs (PTAP) and Compassionate Use Programs (CUP). 5. Patients with a non-ocular sight-threatening disease which has an effect on the primary endpoint (e.g., apoplexia). 6. Hypersensitivity to the active substance or any of the excipients of Vabysmo (as per label).

5. Intervention & Treatment Plan

5.1 Investigational Regimen Dosage/Frequency: Faricimab administered according to the local product label and physician discretion in routine practice. **Route of Administration:** Intravitreal injection. **Duration of Treatment:** 2-year patient follow-up period.

5.2 Concomitant & Prohibited Therapy Permitted: Standard concomitant medications and therapies as prescribed in routine real-world clinical practice. **Prohibited:** Concomitant participation in any other interventional clinical study or investigational ophthalmology trial.

6. Study Timeline & Visit Schedule

| Visit ID | Window (Days) | Key Activities/Procedures | | :---
| :--- | :--- | | **Index Date** | Day 0 | First faricimab treatment injection, baseline VA and CST data extraction | | **Observation** | Up to 2 Years | Real-world routine clinical visits: VA, OCT imaging, injections, safety monitoring | | **End of Study** | Year 2

| Final data extraction on treatment patterns, health economic aspects, and effectiveness |

(Note: Visit schedules are not strictly mandated but follow standard of care/routine clinical practice)

7. Outcome Measures (Endpoints)

7.1 Primary Endpoint Definition: Change in Visual Acuity from Index Date to 12 Months. *(The index date is defined as the date of the first faricimab treatment injection in the eye).*

7.2 Secondary & Exploratory Endpoints 1. Change in Visual Acuity from Index Date to 3, 6, and 24 Months. 2. Change in Central Subfield Thickness (CST) from Index Date to 3, 6, 12, and 24 Months. 3. Percentage of Eyes on Each Treatment Regimen (Fixed, Treat-and-Extend, As Needed, or Other) Over Time. 4. Safety and incidence of ocular and non-ocular adverse events. 5. Health economic evaluation of previous anti-VEGF therapies versus current faricimab treatment.

8. Safety & Adverse Event Reporting

Adverse Event (AE) Monitoring: Continuous monitoring for ocular (eye-related) and non-ocular adverse events during routine clinical visits. **Serious Adverse Events (SAEs):** Reported as per standard real-world pharmacovigilance regulations. **Data Monitoring Committee (DMC):** Internal safety and pharmacovigilance monitoring managed by Hoffmann-La Roche.

9. Statistical Analysis Plan (SAP) Summary

Analysis Populations: Real-world Evidence (RWE) cohort; all enrolled patients receiving at least one dose of faricimab.

Sample Size Justification: $N=850$ to provide sufficient real-world data across participating sites to describe broad treatment patterns and health economics. **Handling of Missing Data:** Handled via standard RWE statistical techniques (e.g., Multiple Imputation or analyzing observed cases) due to the variable nature of routine practice data collection.

10. Quality Assurance & Regulatory Compliance

GCP Compliance: This study will be conducted in accordance with Good Pharmacoepidemiology Practices (GPP), Good Clinical Practice (GCP) guidelines applicable to observational studies, and local privacy regulations. **Monitoring Plan:** Periodic data extraction and verification from Electronic Medical Records (eMR) across

participating sites. **Audit Trail:** Electronic data capture (EDC) systems with full audit trails for data extraction and health economic modeling.

11. Study Identifiers & Governance

Primary ID: {{MR45586}} **Registry Number:** {{NCT06680817}} **Posting ID:** {{934725100705205240}} **Trial Status:** {{RECRUITING}} **Sponsor/Lead Organization:** {{Hoffmann-La Roche (Roche)}} **Study Title:** {{A Real-World Study to Gain Clinical Insights Into Faricimab (FaReal Study)}} **Official Regulatory Title:** {{Real-World, Long-Term Data Collection to Gain Clinical Insights Into Faricimab (FaReal Study)}}

12. Clinical Framework (Ophthalmology Specific)

Primary Condition: {{Neovascular Age-related Macular Degeneration, Diabetic Macular Edema}} **Condition Name / Preferred Name:** {{Macular Degeneration / Macular degeneration}} **Diagnosis Threshold:** {{Confirmed diagnosis requiring anti-VEGF therapy}} **Medical Methodology:** {{Real-world standard of care intravitreal injections}} **Optimization Target:** {{Maintenance/improvement of Visual Acuity and reduction of Retinal Thickness}}

13. Study Procedures & Methodology

Management Pathway: {{Routine ophthalmological clinical practice}} **Education Protocol (HCP):** {{Adherence to local Vabysmo labeling and administration protocols}} **Education Protocol (Patient):** {{Standard of care counseling on retinal disease and treatment compliance}} **Quality Audit Mechanism:** {{Real-world data (RWD) validation and electronic medical record monitoring}}

14. Observation & Follow-Up Schedule

Total Duration: {{104 weeks (2 years) follow-up}} **Onsite Visit Cadence:** {{Variable; dictated by patient's real-world treatment intervals}} **Remote Monitoring Frequency:** {{N/A - Data extracted retrospectively/prospectively from site records}} **Checklist Review Interval:** {{Ongoing extraction of treatment administration and OCT imaging results}}
