

1. Administrative & Study Identification

Full Study Title: Phase 3 Extension Study to Evaluate Long-term Safety of Ianalumab in Participants With Systemic Lupus Erythematosus **Short Title/Acronym:** SIRIUS-SLE Extension **Protocol Number:** CVAY736F12301E1 **NCT Number:** NCT06133972 **Sponsor Name:** Novartis Pharmaceuticals **Investigational Product:** Ianalumab (VAY736) / Placebo **Phase of Development:** Phase 3 **Medical Monitor:** Novartis Clinical Operations Lead

2. Study Synopsis & Rationale

2.1 Study Objective Primary Objective: To evaluate the long-term safety and tolerability of ianalumab administered subcutaneously (s.c.) monthly or quarterly, compared to monthly placebo, in adolescent and adult participants with Systemic Lupus Erythematosus (SLE). **Secondary Objectives:** To evaluate the long-term clinical efficacy (symptom control), pharmacokinetics, and relevant laboratory biomarkers associated with B-cell depletion therapy in SLE over an extended period.

2.2 Background & Rationale To address the need for long-term safety data in participants with anti-nuclear antibody (ANA)-positive systemic lupus erythematosus of moderate-to-severe disease activity. This extension study includes participants who have successfully completed the 60-week treatment period in one of the two SIRIUS-SLE core studies (CVAY736F12301 or CVAY736F12302). Gathering real-world and long-term extension data is essential to establish the safety profile and sustained clinical benefits of ianalumab maintenance therapy.

3. Study Design & Methodology

3.1 Design Framework Study Type: Interventional (Extension Study) **Control Type:** Placebo-controlled **Blinding:** Double-blind **Randomization:** Randomized (rolled over from core study assignments)

3.2 Planned Enrollment & Duration Target \$N\$: Rollover participants from core SIRIUS-SLE 1 and 2 trials. **Number of Sites:** Global, multi-center **Estimated Study Start:** Q4 2023 **Estimated Primary Completion:** ~2031

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria 1. Signed informed consent prior to participation in the extension study (parent/guardian consent and child's assent required for participants <18 years). 2. Must have participated in either one of the two SIRIUS-SLE core studies (CVAY736F12301 or CVAY736F12302) and completed the treatment period through Week 60 without treatment discontinuation. 3. In the judgment of the investigator, the participant must be expected to clinically benefit from continued study treatment.

4.2 Exclusion Criteria 1. Pregnant or nursing (lactating) women; women of child-bearing potential refusing/unable to use highly effective contraception; sexually active males not agreeing to use barrier protection. 2. Active viral, bacterial, or other infections requiring intravenous (IV) or intramuscular (IM) treatment for a clinically significant infection. 3. Plans for administration of live vaccines during the study period. 4. Use of prohibited therapies (e.g., high-dose corticosteroids, traditional Chinese medicines, certain biologics).

5. Intervention & Treatment Plan

5.1 Investigational Regimen Dosage/Frequency: Ianalumab or matching placebo administered monthly or quarterly. **Route of Administration:** Subcutaneous (s.c.) injection. **Duration of Treatment:** Long-term extension.

5.2 Concomitant & Prohibited Therapy Permitted: Stable background standard-of-care treatments for SLE including corticosteroids (CS), anti-malarial drugs, and applicable disease-modifying antirheumatic drugs (DMARDs). **Prohibited:** High-dose systemic corticosteroids, alternative biologic therapies, and live vaccines.

6. Study Timeline & Visit Schedule

Visit ID	Window (Days)	Key Activities/Procedures
1	Screening	Rollover Verification of Week 60 completion from core study, Informed Consent.
2	Baseline	Extension Day 1 Safety Labs, Vitals, Dosing, Disease Activity Assessment.
3-60	Interim	Monthly/Quarterly Subcutaneous Dosing, Safety Labs, Efficacy Assessment, AE Monitoring.
61	End of Study	Final Visit Final Vital Signs, Lab Assessments, Exit Interview, Study Drug Accountability.

7. Outcome Measures (Endpoints)

7.1 Primary Endpoint Definition: Incidence, frequency, and severity of Adverse Events (AEs) and Serious Adverse Events

(SAEs) over the long-term extension period. **Measurement Method:** Clinical assessment, physical examinations, and routine safety laboratory tests.

7.2 Secondary & Exploratory Endpoints Long-term maintenance of efficacy measured by standard SLE disease activity indices (e.g., SLEDAI-2K, BICLA). Long-term pharmacokinetics (PK) and pharmacodynamics (PD), including B-cell depletion profiles.

8. Safety & Adverse Event Reporting

Adverse Event (AE) Monitoring: Continuous monitoring collected via investigator assessments at regular visits, with specific attention to infection rates. **Serious Adverse Events (SAEs):** Reported to the sponsor within 24 hours of site awareness. **Data Monitoring Committee (DMC):** External Independent Data Monitoring Committee (IDMC) utilized to review safety data periodically.

9. Statistical Analysis Plan (SAP) Summary

Analysis Populations: Safety Set (all participants who receive at least one dose of the investigational product in the extension study). **Sample Size Justification:** Dependent on the number of eligible rollover participants completing the core SIRIUS-SLE studies; convenience sample without formal power calculation for a primary efficacy hypothesis. **Handling of Missing Data:** AEs and safety laboratory values will be summarized as observed; standard imputation rules (e.g., LOCF or mixed models) applied for any longitudinal efficacy summaries.

10. Quality Assurance & Regulatory Compliance

GCP Compliance: This study will be conducted in accordance with Good Clinical Practice (GCP) and the Declaration of Helsinki. **Monitoring Plan:** Scheduled onsite and remote monitoring visits according to the Sponsor's risk-based quality management plan. **Audit Trail:** Validated Electronic Data Capture (eDC) system featuring full audit trails, eCRF locking, and standard data clarification procedures.

11. Study Identifiers & Governance

Primary ID: CVAY736F12301E1 **Registry Number:** NCT06133972 **Sponsor/Lead Organization:** Novartis Pharmaceuticals **Study Title:** SIRIUS-SLE Extension **Official Regulatory Title:** Phase 3 Extension Study to Evaluate Long-term Safety of Ianalumab in Participants With Systemic Lupus Erythematosus (SIRIUS-SLE Extension)

12. Clinical Framework (Systemic Lupus Erythematosus Specific)

Primary Condition: Systemic Lupus Erythematosus (SLE) **Diagnosis Threshold:** ANA-positive SLE of moderate-to-severe disease activity **Medical Methodology:** Standard of Care + Ianalumab (B-cell depletion therapy) **Optimization Target:** Long-term safety maintenance and disease activity control

13. Study Procedures & Methodology

Management Pathway: Standard clinical pathway for chronic SLE management **Education Protocol (HCP):** Protocol administration, safety reporting, and s.c. injection guidance **Education Protocol (Patient):** Injection site management, long-term compliance, and AE self-reporting **Quality Audit Mechanism:** Periodic site safety audits & clinical monitoring

14. Observation & Follow-Up Schedule

Total Duration: Long-term extension (Approx. 5 years) **Onsite Visit Cadence:** Monthly or Quarterly (aligned with the assigned subcutaneous injection schedule) **Remote Monitoring Frequency:** Periodic safety checks between scheduled onsite administration **Checklist Review Interval:** At every clinical visit

15. Sign-off & Approval
