

1. Administrative & Study Identification

Full Study Title: A French observational longitudinal multicenter study of adult patients treated in the real-life setting with olaparib for the treatment of metastatic castration-resistant prostate cancer **Short Title/Acronym:** PROWESS (PROstate Olaparib Real World Evidence Study) **Protocol Number:** D0817R00049 **NCT Number:** NCT06031805 **Sponsor Name:** AstraZeneca **Investigational Product:** Olaparib **Phase of Development:** N/A (Observational / Non-interventional) **Medical Monitor:** AstraZeneca Clinical Operations

2. Study Synopsis & Rationale

2.1 Study Objective Primary Objective: To study the added value of olaparib in the treatment of patients with metastatic castration-resistant prostate cancer (mCRPC) in the real-world setting. **Secondary Objectives:** To evaluate treatment sequencing, real-world effectiveness, safety, and BRCA testing patterns to inform future clinical practice.

2.2 Background & Rationale This French non-interventional prospective multicenter cohort study is conducted to gather real-world evidence (RWE) on olaparib. While clinical trials establish efficacy, real-world data is essential to understand the practical applications, treatment sequencing, and genetic testing (BRCA) patterns that shape routine clinical practice and patient outcomes for mCRPC.

3. Study Design & Methodology

3.1 Design Framework Study Type: Observational (Prospective Multicenter Cohort Study) **Control Type:** Single-arm (Non-comparative cohort) **Blinding:** Open-label / None (Non-interventional) **Randomization:** N/A

3.2 Planned Enrollment & Duration Target **SN\$:** 300 patients **Number of Sites:** 52 locations in France **Estimated Study Start:** 11-Oct-2023 **Estimated Primary Completion:** 13-Oct-2028

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria 1. Adult male patients (\$\ge\$ 18\$ years old). 2. Confirmed diagnosis of metastatic castration-resistant prostate cancer (mCRPC). 3. Patients who have initiated olaparib within the last two months of study entry, or for whom the

decision to be treated with olaparib has been made by their physician, or who have been enrolled in the funded early access program. 4. Patients who have been informed and are not opposed to their data collection.

4.2 Exclusion Criteria 1. Patients opposed to the collection of their data. 2. Patients participating in a clinical trial with an investigational prostate cancer targeted drug within 30 days prior to Olaparib initiation.

5. Intervention & Treatment Plan

5.1 Investigational Regimen Dosage/Frequency: Olaparib administered per routine clinical practice at the physician's discretion. **Route of Administration:** Oral. **Duration of Treatment:** Real-world observation period up to the estimated study completion date (~5 years).

5.2 Concomitant & Prohibited Therapy Permitted: Routine concomitant medications for mCRPC allowed in standard clinical practice. **Prohibited:** Investigational prostate cancer targeted drugs within 30 days prior to starting olaparib.

6. Study Timeline & Visit Schedule

Visit ID	Window (Days)	Key Activities/Procedures
1	Screening/Baseline	Day 0 (Within 2 months of olaparib initiation) Information & Non-opposition confirmation, Medical History, BRCA testing status, Olaparib initiation
2	Observation Period	Per routine clinical practice Routine clinical visits, safety/effectiveness data collection, treatment sequencing tracking
3	End of Study	Oct 2028 Final data extraction, survival status, exit of cohort

7. Outcome Measures (Endpoints)

7.1 Primary Endpoint Definition: Real-world effectiveness of olaparib (e.g., overall survival, progression-free survival) in patients with mCRPC. **Measurement Method:** Electronic medical record (EMR) data extraction and physician-certified evaluation.

7.2 Secondary & Exploratory Endpoints * Treatment sequencing patterns in real-world clinical settings. * Real-world safety and tolerability of olaparib. * BRCA testing patterns and frequencies in routine practice.

8. Safety & Adverse Event Reporting

Adverse Event (AE) Monitoring: Real-world safety data collected via routine clinical consultations and patient records. **Serious Adverse Events (SAEs):** Reported according to standard local pharmacovigilance protocols for non-interventional studies. **Data Monitoring Committee (DMC):** AstraZeneca safety and observational data monitoring mechanisms.

9. Statistical Analysis Plan (SAP) Summary

Analysis Populations: Real-World Evidence (RWE) Full Analysis Set (all enrolled mCRPC patients who did not oppose data usage). **Sample Size Justification:** Target $N = 300$ chosen to provide a robust, representative descriptive sample of real-world olaparib use across French medical centers. **Handling of Missing Data:** Standard handling for observational real-world data; missing fields omitted from denominator for specific endpoints.

10. Quality Assurance & Regulatory Compliance

GCP Compliance: The study adheres to Good Pharmacoepidemiology Practices (GPP) and local French data privacy regulations (CNIL/RGPD). **Monitoring Plan:** Data quality control is performed and certified electronically by the participating physicians. **Audit Trail:** Secure eCRF systems are used to process patient data, logging non-opposition consent and clinical updates.

11. Study Identifiers & Governance

Primary ID: D0817R00049 **Registry Number:** NCT06031805 **Sponsor/Lead Organization:** AstraZeneca **Study Title:** PROWESS (PROstate Olaparib real World Evidence Study) **Official Regulatory Title:** A French observational longitudinal multicenter study of adult patients treated in the real-life setting with olaparib for the treatment of metastatic castration-resistant prostate cancer

12. Clinical Framework (mCRPC Specific)

Primary Condition: Metastatic Castration-Resistant Prostate Cancer (mCRPC) **Diagnosis Threshold:** Clinically and histologically confirmed prostate cancer with metastasis and castrate resistance. **Medical Methodology:** Real-World Treatment Pathway / Physician's discretion **Optimization Target:** Evaluating real-world treatment sequencing and BRCA testing patterns

13. Study Procedures & Methodology

Management Pathway: Standard real-world clinical pathway for mCRPC in France **Education Protocol (HCP):** Site initiation and training for observational data entry into eCRFs **Education Protocol (Patient):** Provision of verbal and written information regarding the study and their right to non-opposition **Quality Audit Mechanism:** Data electronically processed and subjected to data quality control certified by the managing physician

14. Observation & Follow-Up Schedule

Total Duration: Approximately 5 years (Estimated completion: 13-Oct-2028) **Onsite Visit Cadence:** Aligned with routine clinical practice schedules (observational) **Remote Monitoring Frequency:** Periodic eCRF data extraction from electronic health records **Checklist Review Interval:** Intervals defined by routine mCRPC pharmacovigilance and real-world follow-up standards
