

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A Phase I, Two-part, Single-center, Open-label, Drug-drug Interaction Study to Assess the Effect of Voriconazole (Part 1) and Quinidine (Part 2) on the Pharmacokinetics of a Single Dose of Repotrectinib (BMS-986472) in Healthy Participants
Short Title:	A Study to Assess the Effect of Voriconazole and Quinidine on the Pharmacokinetics of a Single Dose of Repotrectinib in Healthy Participants
Protocol Number:	1056640947716057842
NCT Number:	NCT06493409
Sponsor Name:	Bristol Myers Squibb
Investigational Product:	quinidine
Phase:	PHASE1
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Maximum observed plasma concentration (C _{max}) 2. Area under the plasma concentration-time curve from time zero to time of last quantifiable concentration (AUC(0-T)) 3. Area under the plasma concentration-time curve from time zero extrapolated to infinite time (AUC(INF))
Secondary Obj.:	1. Number of participants with Adverse Events (AEs) 2. Number of participants with Severe Adverse Events (SAEs) 3. Number of participants with physical examination abnormalities

2.2 Background & Rationale

The purpose of this study is to evaluate the effects of coadministration of voriconazole or quinidine on the pharmacokinetics (PK) of repotrectinib in healthy male and female (individual not of childbearing potential \[INOCBP\]) participants.

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE1, Status: COMPLETED
Target N:	32

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

Not Provided

4.2 Exclusion Criteria

Not Provided
