

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	Real-World Effectiveness of High-Dose Tafamidis on Neurologic Disease Progression in Mixed-Phenotype Transthyretin Amyloid Cardiomyopathy (ATTR-CM)
Short Title:	Real-World Effectiveness of High-Dose Tafamidis on Neurologic Disease Progression in Mixed-Phenotype Transthyretin Amyloid Cardiomyopathy
Protocol Number:	1127709698059579698
NCT Number:	NCT06393465
Sponsor Name:	Pfizer
Investigational Product:	tafamidis
Phase:	Not Applicable
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Rate of neurologic disease progression: Describe and compare the rate of neurologic disease progression before and after initiation of tafamidis in patients with mixed-phenotype ATTR-CM receiving tafamidis 61 mg daily in a real world setting.
Secondary Obj.:	1. Change from Baseline in modified Body Mass Index (BMI)

2.2 Background & Rationale

This study will examine the clinical effectiveness of Tafamidis in patients with Mixed Phenotype Transthyretin Amyloidosis using data that already exist in patients' medical records

3. Study Design & Methodology

Design Framework:	Type: OBSERVATIONAL, Status: ACTIVE_NOT_RECRUITING
Target N:	50

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

- * Age ≥18 years at diagnosis.
- * Diagnosed with ATTRv-CM or ATTRwt-CM, mixed phenotype.
- * Treated with tafamidis, as VYNDAMAX 61 mg (one 61-mg tafamidis capsule) orally once daily for ≥12 months or started on tafamidis 20 mg then switched to VYNDAMAX 61 mg for ≥12 months
- * Have had ≥1 pre- and ≥1 post-treatment neurologic assessments.

4.2 Exclusion Criteria

- * History of any organ transplant.
- * Individuals who are non-ambulatory.

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

- * Prior or current treatment with any disease-modifying therapy (investigational or approved) alone or in combination, except tafamidis, as VYNDAREL 80 mg \[four 20-mg tafamidis meglumine capsules\] orally once daily or VYNDAMAX 61 mg \[one 61-mg tafamidis capsule\] orally once daily.
- * Peripheral neuropathy attributed to causes other than ATTR amyloidosis (eg, diabetes mellitus, B12 deficiency, hypothyroidism, shingles, Lyme disease, HIV infection, secondary to injury, chronic kidney disease).
- * Patient's data fails to pass data quality checks.

11. Study Identifiers & Governance

Primary ID:	1127709698059579698
Registry Number:	NCT06393465
Sponsor:	Pfizer
Study Title:	Real-World Effectiveness of High-Dose Tafamidis on Neurologic Disease Progression in Mixed-Phenotype Transthyretin Amyloid Cardiomyopathy
