

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A Phase 1/2 Open Label, Multi-center Study to Assess the Safety, Tolerability, Pharmacokinetics and Clinical Efficacy of Acalabrutinib in Chinese Adult Subjects With Relapsed or Refractory Mantle Cell Lymphoma, Chronic Lymphocytic Leukemia or Other B-cell Malignancies
Short Title:	Study of Acalabrutinib in Chinese Adult Subjects With Relapsed or Refractory Mantle Cell Lymphoma, Chronic Lymphocytic Leukemia or Other B-cell Malignancies
Protocol Number:	206157704073192053
NCT Number:	NCT03932331
Sponsor Name:	AstraZeneca
Investigational Product:	acalabrutinib
Phase:	PHASE1, PHASE2
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Phase I: Number of Participants With Adverse Events (AEs) and Serious Adverse Events (SAEs): An AE is the development of an undesirable medical condition or the deterioration of a pre-existing medical condition following or during exposure to a pharmaceutical product, whether or not considered causally related to the product. A SAE is an AE occurring during any study phase, that fulfils 1 or more of the following criteria: death, life-threatening, in-participant hospitalization or prolongation of existing hospitalization, persistent or significant disability or incapacity, congenital abnormality or birth defect, and an important medical event that may jeopardize the participant or may require medical treatment to prevent 1 of the outcomes listed above. AEs leading to discontinuation of acalabrutinib were those with action taken was 'Drug Permanently Discontinued' for acalabrutinib. 2. Phase I: Area Under the Plasma Concentration-Time Curve From Zero to Infinity (AUC_{inf}) of Acalabrutinib and ACP-5862 Post Single Dose of Acalabrutinib: Blood samples were collected to determine the AUC_{inf} of acalabrutinib and ACP-5862 in plasma. The AUC_{inf} was determined using non-compartmental method. 3. Phase I: Area Under the Plasma Concentration-Time Curve From Zero to 12 Hours (AUC₀₋₁₂) of Acalabrutinib and ACP-5862 Post Single Dose of Acalabrutinib: Blood samples were collected to determine the AUC₀₋₁₂ of acalabrutinib and ACP-5862 in plasma. The AUC₀₋₁₂ was determined using non-compartmental method.
Secondary Obj.:	1. Phase I: Best Overall Response (BOR) Assessed by Investigator in Participants With R/R CLL 2. Phase I: Best Overall Response Assessed by Investigator in Participants With R/R MCL 3. Phase II: ORR Assessed by Investigator

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

2.2 Background & Rationale

This is an open-label, two-part study to assess the safety, tolerability, pharmacokinetics and clinical efficacy of acalabrutinib in Chinese adult subjects with R/R MCL, CLL and other B-cell malignancies. The study is divided into 2 parts: Phase 1 portion and Phase 2 portion.

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, ACTIVE_NOT_RECRUITING	Phase: PHASE1, PHASE2,	Status:
Target N:	105		

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

Not Provided

4.2 Exclusion Criteria

Not Provided

11. Study Identifiers & Governance

Primary ID:	206157704073192053
Registry Number:	NCT03932331
Sponsor:	AstraZeneca
Study Title:	Study of Acalabrutinib in Chinese Adult Subjects With Relapsed or Refractory Mantle Cell Lymphoma, Chronic Lymphocytic Leukemia or Other B-cell Malignancies

15. Sign-off & Approval

Principal Investigator: _____	Date: _____
Clinical Operations Lead: _____	Date: _____
Lead Statistician: _____	Date: _____
