

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A Phase 1/2 First-in-Human Study of BMS-986258 Alone and in Combination With Nivolumab in Advanced Malignant Tumors
Short Title:	An Investigational Immunotherapy Study of BMS-986258 Alone and in Combination With Nivolumab in Participants With Solid Cancers That Are Advanced or Have Spread
Protocol Number:	354035027163764280
NCT Number:	NCT03446040
Sponsor Name:	Bristol Myers Squibb
Investigational Product:	nivolumab
Phase:	PHASE1, PHASE2
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective: 1. Number of Participants With Adverse Events (AEs): An Adverse Event (AE) is any new untoward medical occurrence or worsening of a preexisting medical condition in a study participant administered study treatment and that does not necessarily have a causal relationship with this treatment. An AE can be any unfavorable and unintended sign (such as an abnormal laboratory finding), symptom, or disease temporally associated with the use of study treatment, whether or not considered related to the study treatment.

A Serious Adverse Event (SAE) is any untoward medical occurrence that, at any dose:

- * Results in death
 - * Is life-threatening (defined as an event in which the participant was at risk of death at the time of the event)
 - * Requires inpatient hospitalization or causes prolongation of existing hospitalization
 - * Results in persistent or significant disability/incapacity
 - * Is a congenital anomaly/birth defect.
2. Number of Participants Who Died During the Study: The number of participants who died during the study. 3. Number of Participants With Dose Limiting Toxicities (DLTs): Dose-limiting toxicity (DLT) refers to a side effect or adverse reaction caused by a drug that is severe enough to prevent an increase in dose or level of that drug. It is typically identified during clinical trials to determine the highest dose of a drug that can be given safely without causing unacceptable side effects.

A participant was considered DLT evaluable if they received 1 dose of BMS-986258 in

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

Part A or 1 dose of BMS-986258 and nivolumab 480mg in Part B and completed the DLT observation period.

Participants who withdraw from the study during the 4-week DLT evaluation period for reasons other than a DLT may be replaced with a new participant at the same dose level.

Secondary Obj.: 1. Objective Response Rate (ORR) 2. Median Duration of Response (mDOR) 3. Progression-Free Survival (PFS) Rate at 6, 9, and 12 Months

2.2 Background & Rationale

The purpose of this study is to determine whether BMS-986258 both monotherapy and in combination with Nivolumab is safe and tolerable in the treatment of advanced malignant tumors.

3. Study Design & Methodology

Design Framework: Type: INTERVENTIONAL, Phase: PHASE1, PHASE2, Status: TERMINATED
Target N: 92

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

- * Histologic confirmation of one of the 5 tumors \[renal cell carcinoma (RCC), colorectal cancer (CRC), non-small cell lung cancer (NSCLC), squamous cell carcinoma of the head and neck (SCCHN), triple negative breast cancer (TNBC)\] (metastatic, recurrent, and/or unresectable), with measurable disease per response evaluation criteria in solid tumors v1.1 (RECIST v1.1)
- * Eastern Cooperative Oncology Group Performance Status of 0 or 1
- * Participants must have received, and then progressed, relapsed, or been intolerant to, at least 1 standard treatment regimen in the advanced or metastatic setting according to solid tumor histologies
- * Women must agree to follow specific methods of contraception, if applicable

4.2 Exclusion Criteria

- * Active, known or suspected autoimmune disease
- * Cytotoxic agents, unless at least 4 weeks have elapsed from last dose of prior anti-cancer therapy and initiation of study therapy
- * Other active malignancy requiring concurrent intervention

Other protocol-defined inclusion/exclusion criteria apply

11. Study Identifiers & Governance

Primary ID: 354035027163764280
Registry Number: NCT03446040
Sponsor: Bristol Myers Squibb
