

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	SurfSubQ - A Prospective Longitudinal Multicenter Observational Study to Investigate Neurofilament Light Chain Levels and Patient Satisfaction After Subcutaneous Ocrelizumab Administration in Persons With Multiple Sclerosis
Short Title:	A Study to Investigate Effects of Ocrelizumab Treatment on Neurofilament Light Chain (NfL) Levels and Participant Satisfaction in Participants With Multiple Sclerosis (MS)
Protocol Number:	634208512431539219
NCT Number:	NCT06780150
Sponsor Name:	Roche
Investigational Product:	ocrelizumab
Phase:	Not Applicable
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Number of Participants Their Level of by Satisfaction With Ocrelizumab SC After 12 Months Assessed Using TASQ-SC: TASQ-SC is a 12-item, participant-reported questionnaire measuring the impact of treatment administration on five domains: Physical Impact, Psychological Impact, Impact on Activities of Daily Living, Convenience, and Satisfaction. Each of the domain/scale scores is scored on a scale of 1-100, where higher scores indicate higher overall satisfaction with the therapy.
Secondary Obj.:	1. Number of Participants by Their Level of Satisfaction With Ocrelizumab SC After the First Injection and After 6 Months Assessed Using TASQ-SC 2. Change From Baseline in NfL Protein Levels in Serum 3. Concentration of NfL Protein Levels in Serum

2.2 Background & Rationale

The main purpose of the study is to evaluate participant satisfaction after administration of ocrelizumab subcutaneous (SC) after 12 months using the therapy administration satisfaction questionnaire subcutaneous (TASQ-SC).

3. Study Design & Methodology

Design Framework:	Type: OBSERVATIONAL, Status: RECRUITING
Target N:	349

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

- * Diagnosis of MS
- * RMS and PPMS participants diagnosed according to the McDonald criteria of 2017

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

* First treatment during the course of MS therapy with ocrelizumab SC according to the local prescribing information, regardless of the reason for starting treatment with ocrelizumab

4.2 Exclusion Criteria

* Participation in interventional studies investigating DMTs for MS

* Prior or simultaneous participation in CONFIDENCE or MoOzaRt (ISRCTN55332718) non interventional study (NIS) at the same study site

* Prior treatment with rituximab (MabThera®) or ublituximab (Briumvi®)

* Severe psychiatric disability

* Pregnant and/or breastfeeding women

11. Study Identifiers & Governance

Primary ID: 634208512431539219

Registry Number: NCT06780150

Sponsor: Roche

Study Title: A Study to Investigate Effects of Ocrelizumab Treatment on Neurofilament Light Chain (NfL) Levels and Participant Satisfaction in Participants With Multiple Sclerosis (MS)

15. Sign-off & Approval
