

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A 2 COHORT, SINGLE DOSE, OPEN-LABEL, RANDOMIZED, PIVOTAL BIOEQUIVALENCE STUDY TO QUALIFY MANUFACTURING SITE TRANSFER FROM BARCELONETA TO ASCOLI FOR PRAZOSIN HYDROCHLORIDE CAPSULES IN HEALTHY ADULT PARTICIPANTS UNDER FASTED CONDITIONS
Short Title:	A Study to Learn How Different Forms of the Study Medicine Called Prazosin Are Taken up Into the Blood in Healthy Adults
Protocol Number:	665135437063357265
NCT Number:	NCT07231978
Sponsor Name:	Pfizer
Investigational Product:	prazosin
Phase:	PHASE1
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Pharmacokinetics: Area under the plasma concentration (AUC) of prazosin 2. PK: Maximum plasma concentration (Cmax) of prazosin
Secondary Obj.:	1. Number of Participants with Treatment Emergent Adverse Events (TEAEs) 2. Number of Participants With Clinical Laboratory Abnormalities 3. Number of participants with change from baseline in physical examinations

2.2 Background & Rationale

Prazosin hydrochloride (HCl) is a medicine taken by mouth that helps lower high blood pressure. It's used to treat hypertension, as well as heart failure. The purpose of this clinical trial is to prove that the prazosin HCl capsules made at the manufacturing site at Barceloneta (Puerto Rico) work the same in the body, as those made at Ascoli (Italy). This will be done by understanding how the different capsules and doses of prazosin HCL are changed and eliminated from your body after you take them. The study will also check how safe these capsules are and how well people can handle them.

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE1, Status: NOT_YET_RECRUITING
Target N:	72

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

Not Provided

4.2 Exclusion Criteria
