

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	Real-World, Long-Term Data Collection to Gain Clinical Insights Into Faricimab (FaReal Study)
Short Title:	A Real-World Study to Gain Clinical Insights Into Faricimab (FaReal Study)
Protocol Number:	934725100705205240
NCT Number:	NCT06680817
Sponsor Name:	Roche
Investigational Product:	faricimab
Phase:	Not Applicable
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Change in Visual Acuity from Index Date to 12 Months: The index date is defined as the date of the first faricimab treatment injection in the eye.
Secondary Obj.:	1. Change in Visual Acuity from Index Date to 3, 6, and 24 Months 2. Change in Central Subfield Thickness (CST) from Index Date to 3, 6, 12, and 24 Months 3. Percentage of Eyes on Each Treatment Regimen (Fixed, Treat-and-Extend, As Needed, or Other) Over Time

2.2 Background & Rationale

The FaReal study aims to evaluate the effectiveness, safety, clinical insights and treatment patterns in patients treated with faricimab, in neovascular age-related macular degeneration (nAMD) or diabetic macular edema (DME) in at least one eye, in real-world routine clinical practice over a 2-year patient follow-up period. Additionally, the FaReal study also aims to describe and evaluate health economic aspects of previous anti-VEGF treatments and current treatment with faricimab.

3. Study Design & Methodology

Design Framework:	Type: OBSERVATIONAL, Status: RECRUITING
Target N:	850

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

- * Patients receiving faricimab according to the local faricimab product label and who have initiated treatment with faricimab at time of the ICF signature date or no more than 3 months prior to the ICF signature date, in diabetic macular edema (DME) or neovascular age-related macular degeneration (nAMD) in at least one eye
- * Patients have received at least one faricimab treatment (the first dose) in the study eye

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

* Patients should have available data for visual acuity (VA) and Central Subfield Thickness (CST) for the Baseline level (i.e. examinations to be performed at the index date or within 4 months prior to it)

4.2 Exclusion Criteria

* Patient participation in any investigational ophthalmology clinical trial that includes receipt of any ophthalmological investigational drug or procedure within the last 28 days prior to the ICF signature date

* Concomitant participation in any interventional clinical study

* Active ocular inflammation and/or suspected/active ocular infection in either eye

* Patients treated with faricimab who have and are currently participating in patient support programs (PSP) that are Market Research and Patient Support Programs (MAP) including Post Trial Access Programs (PTAP) and Compassionate Use Programs (CUP)

* Patients with non-ocular sight threatening disease which have an effect on the primary endpoint (e.g., apoplexia)

* Hypersensitivity to the active substance or any of the excipients of Vabysmo (as per label)

11. Study Identifiers & Governance

Primary ID: 934725100705205240

Registry Number: NCT06680817

Sponsor: Roche

Study Title: A Real-World Study to Gain Clinical Insights Into Faricimab (FaReal Study)
