

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	An Open-Label, Phase 1 Study to Characterize the Effects of Belzutifan on the Pharmacokinetics of a MATE1/2K Substrate, Metformin, in Healthy Adult Participants
Short Title:	A Study of Belzutifan (MK-6482) and Metformin in Healthy Adult Participants (MK-6482-039)
Protocol Number:	989731945171074511
NCT Number:	NCT07121959
Sponsor Name:	Merck
Investigational Product:	metformin
Phase:	PHASE1
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Area Under the Concentration Versus Time Curve From Time Zero to Infinity (AUC0-inf) for Metformin in Plasma: Blood samples will be collected to determine the AUC0-inf of metformin in plasma.
Secondary Obj.:	1. Number of Participants Who Experience One or More Adverse Events (AEs) 2. Number of Participants Who Discontinue Study Drug Due to an AE 3. Area Under the Concentration Versus Time Curve from 0 to the Last Quantifiable Sample (AUC0-last) of Metformin

2.2 Background & Rationale

The goal of this study is to learn how belzutifan (MK-6482) affects the levels of metformin in a healthy person's body over time. Researchers will study levels of metformin in the blood and urine in healthy volunteers after taking metformin alone (Period 1) and metformin with belzutifan (Period 2).

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE1, Status: COMPLETED
Target N:	14

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

Not Provided

4.2 Exclusion Criteria

Not Provided
