

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A Phase 1, Multicenter, Open-label, Single-dose Study to Assess the Pharmacokinetics of Repotrectinib in Healthy Participants and Those With Moderate and Severe Hepatic Impairment
Short Title:	A Study to Assess the Drug Levels of Repotrectinib in Healthy Participants and Participants With Moderate and Severe Hepatic Impairment
Protocol Number:	989741485647126080
NCT Number:	NCT06352528
Sponsor Name:	Bristol Myers Squibb
Investigational Product:	repotrectinib
Phase:	PHASE1
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Maximum observed plasma concentration (Cmax) 2. Time of maximum observed plasma concentration (Tmax) 3. Area under the plasma concentration-time curve from time zero to time of last quantifiable concentration (AUC(0-T))
Secondary Obj.:	1. Number of participants with Adverse Events (AEs) 2. Number of participants with Severe Adverse Events (SAEs) 3. Number of participants with physical examination abnormalities

2.2 Background & Rationale

The purpose of this study is to assess the drug levels of a single oral dose of repotrectinib in participants with moderate and severe HI, and in healthy matched control participants with normal hepatic function.

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE1, Status: COMPLETED
Target N:	18

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

\- Inclusion Criteria for all Participants (Group 1, Group 2, Group 3):.

- i) Adult female (as assigned at birth) not of childbearing potential or male (as assigned at birth) of any race or ethnicity.
- ii) Must have a body mass index between 18 and 40 kg/m² (inclusive) and body weight ? 50 kg at the time of signing the

ICF.

↳ Inclusion Criteria for Participants with Moderate or Severe Hepatic Impairment (Group 1 and Group 2):.

i) Participants have moderate or severe HI or cirrhosis due to chronic hepatic disease and/or prior alcohol use.

ii) Participants have moderate (Group 1), or severe (Group 2) HI as defined by Child-Pugh score.

↳ Inclusion Criteria for a Matched Healthy Participant (Group 3):.

i) Participant must be free of any clinically significant disease that would interfere with the study evaluations.

ii) Participant must have liver-related laboratory test results within the respective reference ranges or with clinically insignificant excursions therefrom as agreed by the investigator.

iii) Participant must be in good health as determined by past medical history, physical examination, vital signs, ECG, and clinical laboratory safety tests. Clinical laboratory safety tests (eg, hematology, chemistry, and urinalysis) and 12-lead ECGs must be within normal limits or clinically acceptable as judged by the investigator.

4.2 Exclusion Criteria

↳ Exclusion Criteria for all Participants (Group 1, Group 2, and Group 3):.

i) Any major surgery within 4 weeks of the study intervention administration.

ii) History of drug abuse within 1 year of study intervention administration.

iii) History of alcohol abuse within 1 year of study intervention administration.

iv) Participants who currently smoke, as well as those who have stopped smoking less than 6 months prior to dosing on Day 1.

↳ Other protocol-defined Inclusion/Exclusion criteria apply.

11. Study Identifiers & Governance

Primary ID: 989741485647126080

Registry Number: NCT06352528

Sponsor: Bristol Myers Squibb
