

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A Phase 1, Open-label, Single-arm Study to Evaluate the Pharmacokinetics and Safety of Letemovir in Pediatric Kidney Transplant (KT) Recipients Less Than 18 Years of Age and Weighing Less Than 40 Kilograms
Short Title:	A Clinical Study of Letemovir (MK-8228) in Children and Adolescents Who Receive a Kidney Transplant (KT) (MK-8228-077)
Protocol Number:	991037922356602273
NCT Number:	NCT07199465
Sponsor Name:	Merck
Investigational Product:	letermovir
Phase:	PHASE1
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Area Under the Curve From Time 0 to 24 Hours (AUC0-24): Blood samples will be collected at multiple time points to estimate AUC0-24
Secondary Obj.:	1. Percentage of Participants Who Experience an Adverse Event (AE) 2. Percentage of Participants Who Discontinue Study Intervention Due to an AE

2.2 Background & Rationale

Researchers are looking for a way to prevent cytomegalovirus (CMV) in children and adolescents who receive a kidney transplant (KT) and weigh less than 40 kilograms (88.2 pounds). The goals of the study are to:

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE1, Status: RECRUITING
Target N:	40

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

The main inclusion criteria include but are not limited to the following:

- * Is a recipient of a primary or secondary allograft kidney
- * Is at least 4 weeks posttransplant and not more than 52 weeks posttransplant at the time of enrollment (Day 1) and is being managed per local standard of care
- * Has stable kidney function posttransplant
- * Has undetectable CMV deoxyribonucleic acid (DNA) from a plasma or whole blood sample collected within 14 days

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

prior to enrollment

- * Must be able to take (as assessed by the investigator) letermovir tablets or oral pellets by mouth, or via gastrostomy or nasogastric tube (oral pellets only)
- * Does not have a condition that may interfere with the absorption of oral medication (e.g., vomiting, diarrhea, or a malabsorptive condition) from the day of enrollment (Day 1) until the intensive pharmacokinetics (IPK) sampling is completed
- * Weighs ≥ 2.5 and ≤ 40 kg at enrollment (Day 1)

4.2 Exclusion Criteria

The main exclusion criteria include but are not limited to the following:

- * Has CMV disease or suspected CMV disease between screening and enrollment
- * Is on dialysis or plasmapheresis at the time of enrollment
- * Has evidence of CMV viremia at any time from screening until the time of enrollment
- * Has Child-Pugh B or C hepatic insufficiency within 14 days before enrollment
- * Is a multi-organ transplant recipient (e.g., kidney-pancreas)
- * Has any uncontrolled infection on the day of enrollment
- * Requires mechanical ventilation, or is hemodynamically unstable, at the time of enrollment
- * Has received or is receiving protocol-specified prohibited medications

11. Study Identifiers & Governance

Primary ID:	991037922356602273
Registry Number:	NCT07199465
Sponsor:	Merck
Study Title:	A Clinical Study of Letermovir (MK-8228) in Children and Adolescents Who Receive a Kidney Transplant (KT) (MK-8228-077)

15. Sign-off & Approval
