

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A Longitudinal, Open-label, Multi-center Study to Explore the Relationship Between Signs, Symptoms, Molecular and Imaging Biomarkers in Participants With Dry Eye Disease Following Anti-inflammatory Treatment
Short Title:	A Study to Explore Signs, Symptoms, and Biomarkers in Dry Eye Disease Participants Following Anti-inflammatory Treatment
Protocol Number:	2846489511269903
NCT Number:	NCT07025811
Sponsor Name:	Roche
Investigational Product:	cyclosporin
Phase:	PHASE4
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Change From Baseline in Corneal Staining as Measured by Sodium Fluorescein
Secondary Obj.:	Not Provided

2.2 Background & Rationale

This study aims to evaluate the performance of biomarkers and their responsiveness to standard-of-care treatments (Vevye® or Xiidra®), in participants with dry eye disease (DED) compared to healthy volunteers (control participants).

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE4, Status: RECRUITING
Target N:	350

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

A. Inclusion Criteria for Participants with DED:

- * The participant reported dry eye-related ocular symptoms for at least 6 months before the screening visit
- * The participant must have either used lubricant eye drops regularly OR had the desire to use lubricant eye drops in the past 3 months
- * Participant must be classified as having moderate/severe DED
- * The participant is deemed by the physician to require a prescription medication for DED (e.g., cyclosporin A or lifitegrast)

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

B. Inclusion Criteria for Healthy Volunteers:

✓ The participant does not have overt clinical signs of DED in either eye

4.2 Exclusion Criteria

- * Intraocular pressure (IOP) ≥ 21.00 millimeters of mercury (mmHg) in either eye
- * Acute allergic conjunctivitis in either eye within 3 months prior to screening
- * Use of contact lenses within 30 days prior to screening
- * Punctal plugs within 3 months prior to screening or any history of punctal cauterization or occlusion by an approach different from punctal plugs
- * Use of ocular anti-inflammatory agents or ocular immunosuppressive agents within 3 months prior to screening
- * Any intraocular injections (e.g., intravitreal [IVT] anti-vascular endothelial growth factor [VEGF]) within 3 months prior to screening, or such injections planned for within the study period
- * Any intraocular immunosuppressive implants within 12 months prior to screening
- * Any history of isotretinoin use within 12 months prior to screening
- * Uncontrolled ocular or systemic disease

11. Study Identifiers & Governance

Primary ID: 2846489511269903

Registry Number: NCT07025811

Sponsor: Roche

Study Title: A Study to Explore Signs, Symptoms, and Biomarkers in Dry Eye Disease Participants Following Anti-inflammatory Treatment
