

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A Randomized, Double-blind, Placebo-controlled Phase III Study to Evaluate the Efficacy, Safety, and Tolerability of Remibrutinib in Patients With Generalized Myasthenia Gravis, Followed by an Open-label Extension Phase
Short Title:	A Study to Investigate the Efficacy, Safety and Tolerability of Remibrutinib Versus Placebo in Adult Patients With Generalized Myasthenia Gravis
Protocol Number:	1106162204321011137
NCT Number:	NCT06744920
Sponsor Name:	Novartis
Investigational Product:	ibrutinib
Phase:	PHASE3
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Change from baseline to Month 6 in Myasthenia Gravis Activity of Daily Living (MG-ADL) total score: The MG-ADL is a categorical scale that assesses MG symptoms and their effects on daily activities. MG-ADL is composed of items related to patient's assessment of functional disability secondary to ocular (2 items), bulbar (3 items), respiratory (1 item), and gross motor or limb (2 items) impairment related to effects from MG. Each item is assessed on a 4-points scale where a score 0 represents normal function and a score 3 represents loss of ability to perform that function (total score 0 to 24).
Secondary Obj.:	1. Change from baseline to Month 6 in Quantitative Myasthenia Gravis (QMG) total score 2. Proportion of participants with ? 5 points reduction from baseline to Month 6 of QMG total score without rescue medication and/or strongly confounding prohibited medication 3. Proportion of participants with ? 3 points reduction from baseline to Month 6 of Myasthenia Gravis Activity of Daily Living (MG-ADL) scale total score without rescue medication and/or strongly confounding prohibited medication

2.2 Background & Rationale

A study to evaluate the efficacy, safety and tolerability of Remibrutinib versus placebo in adult patients with Generalized Myasthenia Gravis who are on stable, standard-of-care (SOC) treatment.

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE3, Status: RECRUITING
Target N:	180

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

- * Adult patients with gMG (age 18-75 years)
- * Confirmed diagnosis of Myasthenia Gravis Foundation of America (MGFA) Class II-IV gMG at screening and likely not in need of a respirator for the duration of the study, as judged by the Investigator
- * Documented evidence of positive serologic testing for AChR+ antibody or MuSK+ antibody at screening, OR seronegative for both AChR and MuSK antibodies at screening
- * Baseline MG-ADL score ≥ 6 with $\geq 50\%$ of the total score due to non ocular symptoms
- * Participants who have been on a stable dose of standard-of-care treatment as specified in the protocol
- * Able to safely swallow the study medication according to investigator clinical judgement based on a bedside swallowing test or another formal swallowing test in line with local practice, both at Screening and Baseline

4.2 Exclusion Criteria

- * Prior to baseline have been treated with intravenous immunoglobulins or plasma exchange (IVIg/PLEX) in the past month, with rituximab in the past 6 months, eculizumab in the past 2 months, ravulizumab or other complement inhibitors in the past 3 months, efgartigimod or other anti-FcRn therapies in the past 3 months, or had a thymectomy in the past 6 months or a planned thymectomy during the trial period
- * Women of child-bearing potential, defined as all women physiologically capable of becoming pregnant, unless they are using highly effective methods of contraception during dosing and for 1 week after stopping of study treatment

Other protocol-defined inclusion/exclusion criteria may apply.

11. Study Identifiers & Governance

Primary ID:	1106162204321011137
Registry Number:	NCT06744920
Sponsor:	Novartis
Study Title:	A Study to Investigate the Efficacy, Safety and Tolerability of Remibrutinib Versus Placebo in Adult Patients With Generalized Myasthenia Gravis

15. Sign-off & Approval
