

# Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

## 1. Administrative & Study Identification

|                          |                                                                                                                                                                                |
|--------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Full Study Title:        | A Phase III, Randomized, Double-Blind, Placebo-Controlled, Multicenter Study To Evaluate The Efficacy And Safety of Obinutuzumab in Patients With Systemic Lupus Erythematosus |
| Short Title:             | A Study to Evaluate the Efficacy and Safety of Obinutuzumab in Participants With Systemic Lupus Erythematosus                                                                  |
| Protocol Number:         | 132655156338700294                                                                                                                                                             |
| NCT Number:              | NCT04963296                                                                                                                                                                    |
| Sponsor Name:            | Roche                                                                                                                                                                          |
| Investigational Product: | paracetamol                                                                                                                                                                    |
| Phase:                   | PHASE3                                                                                                                                                                         |
| Medical Monitor:         | [Not Provided in Posting]                                                                                                                                                      |

## 2. Study Synopsis & Rationale

### 2.1 Study Objective

|                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|--------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Primary Objective: | 1. Percentage of Participants who Achieve Systemic Lupus Erythematosus Responder Index (SRI[4]) at Week 52: SRI(4) requires reduction from baseline of $\geq 4$ points in the Systemic Lupus Erythematosus Disease Activity Index 2000 (SLEDAI-2K), no new systems or organs affected, as defined by $\geq 1$ new British Isles Lupus Assessment Group (BILAG) A or $\geq 2$ new BILAG B items compared with baseline using BILAG-2004, and no worsening from baseline of $\geq 0.30$ points on a 3-point Physician's Global Assessment Visual Analogue Scale (PGA-VAS). |
| Secondary Obj.:    | 1. Percentage of Participants who Achieve SRI(6) at Week 52 2. Percentage of Participants Entering the Study on Prednisone $\geq 10$ mg/day (or equivalent) who Achieve Sustained Corticosteroid Control 3. Time to First BILAG Flare over 52 Weeks                                                                                                                                                                                                                                                                                                                      |

### 2.2 Background & Rationale

This parallel-group, double-blind, placebo-controlled study will evaluate the efficacy and safety of obinutuzumab versus placebo in participants with active, autoantibody-positive systemic lupus erythematosus (SLE) who are treated with standard-of-care therapy.

## 3. Study Design & Methodology

|                   |                                                                    |
|-------------------|--------------------------------------------------------------------|
| Design Framework: | Type: INTERVENTIONAL, Phase: PHASE3, Status: ACTIVE_NOT_RECRUITING |
| Target N:         | 303                                                                |

## 4. Subject Selection (Eligibility Criteria)

### 4.1 Inclusion Criteria

# Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

- \* Diagnosis of SLE according to the 2019 European League Against Rheumatism/American College of Rheumatology (EULAR/ACR) Classification Criteria  $\geq 12$  weeks prior to screening
- \* Anti-nuclear antibody (ANA)  $\geq 1:80$ , or anti-dsDNA and/or anti-Sm antibodies above the upper limit of normal (ULN), as determined by the central laboratory at screening
- \* Low C3 or low C4 or low CH50 complement as determined by the central laboratory at screening
- \* High disease activity at screening, based on; BILAG-2004 (Category A disease in  $\geq 1$  organ system and/or Category B disease in  $\geq 2$  organ systems), Systemic Lupus Erythematosus Disease Activity Index 2000 (SLEDAI-2K) (score  $\geq 8$ ) and Physician's Global Assessment (PGA) (score  $\geq 1.0$  on a 0 to 3 visual analogue scale \[VAS\])
- \* High disease activity on Day 1, based on; SLEDAI-2K (score  $\geq 8$ ) and PGA (score  $\geq 1.0$  on a 0 to 3 VAS)
- \* Current receipt of  $\geq 1$  of the following classes of standard therapies for the treatment of SLE at stable doses: oral corticosteroid (OCS), antimalarials, conventional immunosuppressants
- \* Other inclusion criteria may apply
- \* The Medical Monitor may be consulted if there are any questions related to eligibility criteria

## 4.2 Exclusion Criteria

- \* Pregnancy or breastfeeding
- \* Presence of significant lupus-associated renal disease and/or renal impairment
- \* Receipt of an excluded therapy, including any anti-CD20, anti-CD19 therapy less than 9 months prior to screening or during screening; or cyclophosphamide, tacrolimus, ciclosporin, or voclosporin during the 2 months prior to screening or during screening
- \* Significant or uncontrolled medical disease which, in the investigator's opinion, would preclude patient participation
- \* Known active infection of any kind or recent major episode of infection
- \* Intolerance or contraindication to study therapies
- \* Other exclusion criteria may apply

## 11. Study Identifiers & Governance

|                         |                                                                                                               |
|-------------------------|---------------------------------------------------------------------------------------------------------------|
| <b>Primary ID:</b>      | 132655156338700294                                                                                            |
| <b>Registry Number:</b> | NCT04963296                                                                                                   |
| <b>Sponsor:</b>         | Roche                                                                                                         |
| <b>Study Title:</b>     | A Study to Evaluate the Efficacy and Safety of Obinutuzumab in Participants With Systemic Lupus Erythematosus |

## 15. Sign-off & Approval
