

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A Global, Multicenter, Randomized, Double-blind, Double-dummy, Parallel-group, Phase 3b Study to Assess the Efficacy, Safety, and Tolerability of Remibrutinib 25 mg b.i.d. in Comparison to Placebo With Omalizumab 300 mg Every 4 Weeks as Active Control Over 52 Weeks in Adult Patients With Chronic Spontaneous Urticaria Inadequately Controlled by Second Generation H1-antihistamines and an Open-label 52-week Optional Extension to Assess Long-term Efficacy, Safety and Tolerability of Remibrutinib 25 mg b.i.d.
Short Title:	Phase 3b Study to Assess the Efficacy, Safety, and Tolerability of Remibrutinib in Comparison to Placebo, With Omalizumab as Active Control, in Adult CSU Patients, Followed by an Open-label 52-week Optional Extension.
Protocol Number:	139866335997781069
NCT Number:	NCT06042478
Sponsor Name:	Novartis
Investigational Product:	omalizumab
Phase:	PHASE3
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Absolute change from baseline in Weekly Urticaria Activity Score (UAS7): The UAS7 is the sum of the Weekly Hives Severity Score (HSS7 score) and the Weekly Itch Severity Score (ISS7 score). The possible range of the weekly UAS7 score is 0 - 42 (highest activity).
Secondary Obj.:	1. Achievement of UAS7=0 (yes/no) 2. Improvement of severity of itch, assessed as absolute change from baseline in ISS7 score 3. Improvement of severity of hives, assessed as absolute change from baseline in HSS7 score

2.2 Background & Rationale

The purpose of the core phase of the trial is to assess the efficacy, safety and tolerability of remibrutinib (LOU064) 25 milligrams (mg) twice a day (b.i.d.) over placebo for 24 weeks and in comparison to omalizumab 300 mg every 4 weeks (q4w) for 52 weeks in participants with chronic spontaneous urticaria (CSU) inadequately controlled by H1-antihistamines (H1-AH).

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE3, Status: ACTIVE_NOT_RECRUITING
Target N:	471

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

- * Male and female adult participants ≥18 years of age at the time of signing the informed consent.
- * CSU duration for ≥ 6 months prior to screening.
- * Diagnosis of CSU inadequately controlled by second generation H1-AH at the time of randomization, defined as:
 - * The presence of itch and hives for ≥6 consecutive weeks prior to screening, despite the use of second-generation H1-AH during this time period.
- * UAS7 score (range 0-42) ≥16, ISS7 score (range 0-21) ≥ 6 and HSS7 score (range 0- 21) ≥ 6 during the 7 days prior to randomization (Day 1).
- * Documentation of hives within three months before randomization.
- * Willing and able to complete an Urticaria Patient Daily Diary (UPDD) for the duration of the study and adhere to the study protocol.
- * Participants must not have had more than one missing UPDD entry (either morning or evening) in the 7 days prior to randomization (Day 1).

4.2 Exclusion Criteria

- * Prior exposure to ligelizumab, omalizumab and other biologics with any effect in CSU, including anti-IgE therapies.
- * Significant bleeding risk or coagulation disorders.
- * History of gastrointestinal bleeding.
- * Requirement for anti-platelet or anti-coagulant medication.
- * History or current hepatic disease.
- * Evidence of clinically significant cardiovascular, neurological, psychiatric, pulmonary, renal, hepatic, endocrine, metabolic, hematological disorders, gastrointestinal disease or immunodeficiency that, in the investigator's opinion, would compromise the safety of the participant, interfere with the interpretation of the study results or otherwise preclude participation or protocol adherence of the participant.
- * Evidence of helminthic parasitic infection as evidenced by stools being positive for a pathogenic organism according to local guidelines.
- * Documented history of anaphylaxis.
- * Pregnant or nursing (lactating) women.

11. Study Identifiers & Governance

Primary ID:	139866335997781069
Registry Number:	NCT06042478
Sponsor:	Novartis
Study Title:	Phase 3b Study to Assess the Efficacy, Safety, and Tolerability of Remibrutinib in Comparison to Placebo, With Omalizumab as Active Control, in Adult CSU Patients, Followed by an Open-label 52-week Optional Extension.

15. Sign-off & Approval
