2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Disease-free Survival (DFS), as Assessed by the Investigator: DFS, defined as the time from randomization to the first documented recurrence of disease or new primary NSCLC as determined by the investigator through use of an integrated assessment of radiographic data, biopsy sample results (if clinically feasible), and clinical status or death from any cause, whichever occurs first
Secondary Obj.:	1. Overall Survival (OS) 2. Percentage of Participants With Adverse Events (AEs) 3. AEs Grade 3-5 With a Difference in Incidence Rate of at Least 2% Between Treatment Arms

2.2 Background & Rationale

This randomized, active-controlled, multicenter, open-label, Phase III study is designed to investigate the efficacy and safety of alectinib compared with platinum-based in the adjuvant setting. Participants in the experimental arm will receive alectinib at 600 mg orally twice daily (BID) taken with food for 24 months.
