2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Investigator-assessed DFS: Investigator-assessed disease-free survival (DFS), defined as the time from randomization to the first occurrence of a DFS event, defined as any of the following: * Local (pelvic) recurrence of urothelial carcinoma (UC) (including soft tissue and regional lymph nodes) * Urinary tract recurrence of UC (including all pathological stages and grades) * Distant metastasis of UC * Death from any cause
Secondary Obj.:	1. Overall survival (OS) 2. Independent Review Facility (IRF)-Assessed DFS 3. Investigator-Assessed Disease-Specific Survival

2.2 Background & Rationale

This is a global Phase III, randomized, placebo-controlled, double-blind study designed to evaluate the efficacy and safety of adjuvant treatment with atezolizumab compared with placebo in participants with MIBC who are ctDNA positive and are at high risk for recurrence following cystectomy.
