

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A Phase 3B/4, Multicenter, Randomized, Double-blind Placebo-controlled Study to Evaluate the Efficacy and Safety of Deucravacitinib in Participants With Moderate-to-severe Scalp Psoriasis (PSORIATYK SCALP)
Short Title:	Efficacy and Safety of Deucravacitinib Versus Placebo in Participants With Moderate-to-severe Scalp Psoriasis
Protocol Number:	331079207309219613
NCT Number:	NCT05478499
Sponsor Name:	Bristol Myers Squibb
Investigational Product:	deucravacitinib
Phase:	PHASE4
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Percentage of Participants With a Scalp-specific Physician Global Assessment Score of 0 or 1 (Ss-PGA 0/1) at Week 16: ss-PGA 0/1 response as a percentage of participants with an ss-PGA score of 0 (clear) or 1 (almost clear) with at least a 2-point reduction from baseline at Week 16. Scalp lesions are evaluated in terms of clinical signs of redness, thickness, and scaliness and scored on the following 5-point ss-PGA scale: 0 = absence of disease, 1 = very mild disease, 2 = mild disease, 3 = moderate disease, 4 = severe disease.
Secondary Obj.:	1. Percentage of Participants With a Psoriasis Scalp Severity Index 90 (PSSI 90) at Week 16 2. Change From Baseline in Scalp-specific Itch Numerical Rating Scale (NRS) Score at Week 16 3. Percentage of Participants With a Static Physician Global Assessment Score of 0 or 1 (s-PGA 0/1) at Week 16

2.2 Background & Rationale

The purpose of this study is to compare the efficacy and safety of deucravacitinib to placebo in participants with moderate-to-severe scalp psoriasis.

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE4, Status: COMPLETED
Target N:	154

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Men and women diagnosed with stable plaque psoriasis with scalp involvement for 6 months or more. Stable psoriasis is defined as no morphology changes or significant flares of disease activity in the opinion of the Investigator
2. Deemed by the Investigator to be a candidate for phototherapy or systemic therapy
3. Moderate-to-severe scalp psoriasis as defined by scalp-specific Physician's Global Assessment (ss-PGA) ? 3; ? 20% scalp surface area (SSA); Psoriasis Scalp Severity Index (PSSI) ? 12 at the Screening visit and Day 1
4. ? 3% of Body Surface Area (BSA) involvement at the Screening visit and Day 1
5. Evidence of plaque psoriasis in a non-scalp area
6. Failed to respond to, or intolerant of ? 1 topical therapy for scalp psoriasis

4.2 Exclusion Criteria

* Target Disease Exceptions:

1. Has nonplaque psoriasis (ie, guttate, inverse, pustular, erythrodermic or drug-induced psoriasis) at Screening or Day 1
- 1 Other protocol-defined inclusion/exclusion criteria apply

11. Study Identifiers & Governance

Primary ID: 331079207309219613

Registry Number: NCT05478499

Sponsor: Bristol Myers Squibb

Study Title: Efficacy and Safety of Deucravacitinib Versus Placebo in Participants With Moderate-to-severe Scalp Psoriasis

15. Sign-off & Approval

Principal Investigator: _____ Date: _____
