

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A Phase IV, Prospective, Multicenter, Open-label, Mother-milk Study to Evaluate Ofatumumab Concentration in the Breast Milk of Lactating Women With Relapsing Forms of Multiple Sclerosis Receiving Ofatumumab
Short Title:	Concentration of Ofatumumab in the Breast Milk of Lactating Women With Relapsing Forms of Multiple Sclerosis
Protocol Number:	418425452749320114
NCT Number:	NCT06444113
Sponsor Name:	Novartis
Investigational Product:	ofatumumab
Phase:	PHASE4
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Concentration of ofatumumab in breast milk.: Quantification of ofatumumab concentration in breast milk of lactating women with RMS who have initiated or re-initiated ofatumumab treatment post-partum.
Secondary Obj.:	1. Evaluate other PK parameters of ofatumumab in breast milk and plasma of lactating women with RMS who have initiated or re-initiated ofatumumab treatment post-partum 2. Estimation of relative infant dose of ofatumumab 3. Safety data collected in lactating women receiving ofatumumab and their breastfed infants

2.2 Background & Rationale

This study will evaluate whether ofatumumab is excreted at quantifiable levels and at which concentrations in breast milk of lactating women with RMS). The study will include lactating mothers who plan to breastfeed and initiate/re-initiate ofatumumab 2-24 weeks post-partum.

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE4, Status: RECRUITING
Target N:	20

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

- Written informed consent must be obtained before any study assessment is performed.
- Participant is female with a relapsing form of MS and at least 18 years of age at the time of providing consent.
- Participant must be postpartum at the time of enrollment, plan to be exclusively breastfeeding and willing to provide

breast milk samples.

4. Participant has delivered term infant (at least 37 weeks gestation).

5. Participant must plan to initiate or re-initiate or have initiated or re-initiated treatment with ofatumumab between 2 to 24 weeks postpartum. The decision to be treated with ofatumumab and to breastfeed is made in accordance with the treating physician and must be completely independent of the decision to participate in this study.

4.2 Exclusion Criteria

1. Use of any investigational drugs within 5 half-lives of enrollment, or within 30 days or until the expected pharmacodynamic effect has returned to baseline, whichever is longer.
2. Participant taking medications prohibited by the study protocol at screening.
3. Pregnant woman, confirmed by positive serum pregnancy test during screening.
4. Female of childbearing potential should use effective contraception as per local label.
5. Participant has history of chronic alcohol abuse or drug abuse in the last year.
6. Participant has any medical, obstetrical, psychiatric or other medical condition that, in the opinion of the Investigator, can jeopardize or would compromise the subject's ability to participate in this study or confound the study assessment.
7. Participant has history of breast implants, breast augmentation, or breast reduction surgery.
8. Participant has received anti-CD20 agents during the second and third trimesters of pregnancy.
9. Active infections, including mastitis (participant may be included once the infection is resolved).
10. Prior or current history of primary or secondary immunodeficiency, or participant in an otherwise severely immunocompromised state.
11. Participant with active hepatitis B disease prior to the initiation or re-initiation of ofatumumab. (Participant with positive hepatitis B serology should consult a liver disease medical standards to prevent hepatitis B reactivation.)
12. History of malignancy of any organ system (other than localized basal cell carcinoma of the skin or in situ cervical cancer), treated or untreated, within the past 5 years, regardless of whether there is evidence of local recurrence or metastases.
13. Any contraindication as per local label.
14. Participant who has an infant with any abnormality that may interfere with breastfeeding or confound the study assessment in the opinion of the Investigator.

11. Study Identifiers & Governance

Primary ID:	418425452749320114
Registry Number:	NCT06444113
Sponsor:	Novartis
Study Title:	Concentration of Ofatumumab in the Breast Milk of Lactating Women With Relapsing Forms of Multiple Sclerosis
