

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A PHASE 3 RANDOMIZED, DOUBLE-BLIND, PLACEBO-CONTROLLED STUDY TO INVESTIGATE THE EFFICACY AND SAFETY OF RITLECITINIB IN PEDIATRIC PARTICIPANTS 6 TO LESS THAN 12 YEARS OF AGE WITH SEVERE ALOPECIA AREATA
Short Title:	A Study to Learn About Medicine Called Ritlecitinib in Children Aged Between 6 to 12 Years With Severe Alopecia Areata
Protocol Number:	499424325523173823
NCT Number:	NCT07029711
Sponsor Name:	Pfizer
Investigational Product:	ritlecitinib
Phase:	PHASE3
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. For US and Countries Following US Analysis Plan: Response based on achieving an absolute Severity of Alopecia Tool (SALT) score ≥ 20 .: The difference in proportions of participants with the SALT ≥ 20 response at Week 24 between each ritlecitinib dose and placebo groups in pediatric AA participants defined by the inclusion and exclusion criteria. 2. For EU/UK and Countries Following EU/UK Analysis Plan: Response based on achieving an absolute SALT score ≥ 10 .: The difference in proportions of participants with the SALT ≥ 10 response at Week 24 between each ritlecitinib dose and placebo groups in pediatric AA participants defined by the inclusion and exclusion criteria.
Secondary Obj.:	1. For EU/UK and Countries Following EU/UK Analysis Plan: Patient Global Impression of Change (PGI-C) response defined as a score of "moderately improved" or "greatly improved". 2. For all countries: Change from baseline (CFB) in SALT score. 3. For all countries: Response based on achieving absolute SALT score ≥ 20 at all visits (except for that included as the primary endpoint).

2.2 Background & Rationale

The purpose of this study is to learn about the safety and effects of the study medicine (called ritlecitinib) for the possible treatment of severe alopecia areata. Alopecia areata is a condition that causes hair loss.

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE3, Status: RECRUITING
Target N:	225

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

- * A diagnosis of AA (including alopecia totalis (AT) and alopecia universalis (AU)) with at least 50% scalp hair loss due to AA (ie, SALT score of ≥ 50) at both screening and baseline visits, without evidence of terminal hair regrowth within the previous 12 months.
- * For study participants in the EU/UK only: History of clinical response failure to AA treatment (such as topical, off-label pharmacologic, or hairpiece prosthetics)
- * Documented evidence of having received varicella vaccination (2 doses), OR evidence of prior exposure to varicella zoster virus (VZV) based on serological testing (ie, a positive VZV Immunoglobulin G (IgG) antibody (Ab) result) at screening.

4.2 Exclusion Criteria

- * Other (non-AA) types of alopecia, including any known congenital cause of AA.
- * Pre-existing hearing loss.
- * Any present or history of malignancies or lymphoproliferative disorder such as Epstein-Barr virus (EBV) related lymphoproliferative disorder, history of lymphoma, history of leukemia, or signs and symptoms suggestive of current lymphatic or lymphoid disease.
- * Clinically significant depression per PROMIS Parent Proxy Short Form - Depressive symptoms (T-score ≥ 70).
- * Any evidence of untreated or inadequately treated active or latent Mycobacterium tuberculosis (TB) infection; history (one or more episodes) of severe or serious cytomegalovirus (CMV) infection, herpes zoster (shingles) or disseminated herpes simplex; infection with hepatitis B virus (HBV) or hepatitis C virus (HCV).
- * Vaccination with live attenuated replication-competent vaccine within 6 weeks of first dose of study intervention.

11. Study Identifiers & Governance

Primary ID: 499424325523173823

Registry Number: NCT07029711

Sponsor: Pfizer

Study Title: A Study to Learn About Medicine Called Ritlecitinib in Children Aged Between 6 to 12 Years With Severe Alopecia Areata

15. Sign-off & Approval
