

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A Phase 3, Randomized, Double-Blind, Placebo-Controlled Study to Evaluate the Efficacy and Safety of Rimegepant for Migraine Prevention in Chinese Participants
Short Title:	A Study to Learn About the Safety and Effects of Rimegepant to Prevent Migraine in Chinese Subjects.
Protocol Number:	508485132428652145
NCT Number:	NCT05810038
Sponsor Name:	Pfizer
Investigational Product:	rimegepant
Phase:	PHASE3
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Mean change from the Observation Phase (OP) in the number of migraine days per month over the entire Double Blind Treatment (DBT) Phase: The change from OP (up to 4 weeks) is calculated as the number of monthly migraine days during the 12 weeks of the DBT phase (Weeks 1 to 12) minus number of monthly migraine days during the OP (up to 4 weeks).
Secondary Obj.:	1. Proportion of participants with $\geq 50\%$ reduction from the OP in the number of moderate to severe migraine days per month over the entire DBT Phase 2. Mean change from the OP in the number of migraine days per month in the first 4 weeks (Weeks 1 to 4) of the DBT Phase. 3. Mean change from the OP in the number of migraine days per month in the last 4 weeks (Weeks 9 to 12) of the DBT Phase.

2.2 Background & Rationale

The purpose of this study is to learn about the effects of Rimegepant to help prevent migraine.

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE3, Status: ACTIVE_NOT_RECRUITING
Target N:	778

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

1.Target Population: Participant has at least 1 year history of migraine (with or without aura) consistent with a diagnosis according to the International Classification of Headache Disorders, 3rd Edition, including the following:

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Age of onset of migraines prior to 50 years of age
2. Migraine attacks, on average, lasting 4 to 72 hours if untreated
3. Per participant report, 4 to 18 migraine attacks of moderate or severe intensity per month within the last 3 months prior to the Screening Visit (month is defined as 4 weeks for the purpose of this protocol)
4. 6 or more migraine days during Observation Phase
5. Not more than 18 headache days during the Observation Phase
6. Ability to distinguish migraine attacks from tension/cluster headaches.
7. Participants with contraindications for use of triptans may be included provided they meet all other study entry criteria.

4.2 Exclusion Criteria

1. Participant has a history of basilar migraine or hemiplegic migraine.
2. Participants are excluded if they have had no therapeutic response with ≥ 2 of the 9 medication categories of preventive treatment of migraine after an adequate therapeutic trial in the past 3 years per investigator's judgement.

11. Study Identifiers & Governance

Primary ID: 508485132428652145

Registry Number: NCT05810038

Sponsor: Pfizer

Study Title: A Study to Learn About the Safety and Effects of Rimegepant to Prevent Migraine in Chinese Subjects.
