

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	An Open-label Long-term Follow-up Study to Evaluate the Effects of Sotatercept When Added to Background Pulmonary Arterial Hypertension (PAH) Therapy for the Treatment of PAH (MK-7962-038)
Short Title:	A Clinical Study of Sotatercept (MK-7962) in People With Pulmonary Arterial Hypertension (MK-7962-038)
Protocol Number:	600069369413767794
NCT Number:	NCT07218029
Sponsor Name:	Merck
Investigational Product:	Sotatercept
Phase:	PHASE3
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Number of Participants Who Experience an Adverse Event (AE): An AE is any untoward medical occurrence in a clinical study participant, temporally associated with the use of study intervention, whether or not considered related to the study intervention. The number of participants who experience an AE will be reported. 2. Number of Participants Who Discontinue Study Treatment Due to an AE: An AE is any untoward medical occurrence in a clinical study participant, temporally associated with the use of study intervention, whether or not considered related to the study intervention. The number of participants who discontinue study treatment due to an AE will be reported. 3. Number of Participants with Detectable Anti-Drug Antibodies (ADAs): ADAs will be detected in serum. The number of participants with detectable ADAs will be reported.
Secondary Obj.:	1. Change From Baseline in 6-Minute Walk Distance (6MWD) 2. Change From Baseline in N-Terminal Pro-Hormone B-type Natriuretic Peptide (NT-proBNP) Levels 3. Change From Baseline in the Percentage of Participants Who Improve in Modified New York Heart Association/ World Health Organization Classification of Functional Status (WHO FC)

2.2 Background & Rationale

Researchers are looking for more ways to treat PAH. In PAH, the blood vessels in the lungs become thick and narrow, which makes it harder for blood to flow. This causes high blood pressure in the lungs and overworks the heart. PAH can make it hard to breathe and be active. Some standard (usual) treatments for PAH can treat symptoms of PAH but do not stop PAH from getting worse.

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

3. Study Design & Methodology

Design Framework: Type: INTERVENTIONAL, Phase: PHASE3, Status: NOT_YET_RECRUITING

Target N: 815

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

The main inclusion criteria include but are not limited to the following:

- * Has completed the MK-7962-004 study requirements
- * Is willing to adhere to the study visit schedule, and understands and will comply with all protocol requirements

4.2 Exclusion Criteria

The main exclusion criteria include but are not limited to the following:

- * Is a female who is pregnant or breastfeeding
- * Is or has an immediate family member who is investigational site or Sponsor staff directly involved with this study
- * Is currently enrolled in another investigational product study other than a sotatercept study
- * Is incapacitated

11. Study Identifiers & Governance

Primary ID: 600069369413767794

Registry Number: NCT07218029

Sponsor: Merck

Study Title: A Clinical Study of Sotatercept (MK-7962) in People With Pulmonary Arterial Hypertension (MK-7962-038)

15. Sign-off & Approval

Principal Investigator: _____ Date: _____

Clinical Operations Lead: _____ Date: _____

Lead Statistician: _____ Date: _____
