

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A PHASE 3, RANDOMIZED, DOUBLE BLIND, PLACEBO CONTROLLED STUDY OF PF-06821497 (MEVROMETOSTAT) WITH ENZALUTAMIDE IN METASTATIC CASTRATION RESISTANT PROSTATE CANCER (MEVPRO-2)
Short Title:	A Study to Learn How PF-06821497 (Mevrometostat) Works in Men With Metastatic Castration-resistant Prostate Cancer.
Protocol Number:	680142559345727201
NCT Number:	NCT06629779
Sponsor Name:	Pfizer
Investigational Product:	enzalutamide
Phase:	PHASE3
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Radiographic Progression Free Survival (rPFS): rPFS is defined as the time from the date of randomization to first objective evidence of radiographic progression as assessed in soft tissue per Response Evaluation Criteria in Solid Tumors (RECIST) v1.1 or in bone per Prostate Cancer Clinical Trials Working Group 3 (PCWG3) guidelines by BICR, or death, whichever occurs first.
Secondary Obj.:	1. Overall survival (OS) 2. To demonstrate that PF-06821497 in combination with enzalutamide is superior to placebo in combination with enzalutamide in prolonging TTPP 3. Duration of Response (DoR) in measurable soft tissue disease

2.2 Background & Rationale

This study will explore whether a combination of the investigational drug PF-06821497 and enzalutamide will work better than taking enzalutamide alone in participants with mCRPC who are ARSi or abiraterone naïve.

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE3, Status: RECRUITING
Target N:	900

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

- * Histologically or cytologically confirmed adenocarcinoma of the prostate without small cell features.
- * Metastatic disease in bone documented on bone scan, or in soft tissue documented on CT/MRI scan.
- * Progressive disease in the setting of medical or surgical castration.

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

* ECOG performance status 0 or 1, with a life expectancy of ≥12 months as assessed by the investigator.

4.2 Exclusion Criteria

- * Any medical or psychiatric condition including recent (within the past year) or active suicidal ideation/behavior or laboratory abnormality that make the participant inappropriate for the study.
- * Known history of active inflammatory gastrointestinal disease, chronic diarrhea, or previous gastric resection or lap-band surgery.
- * Clinically significant cardiovascular disease.
- * Known or suspected brain metastasis or active leptomeningeal disease or clinically significant history of seizure.
- * Any history of myelodysplastic syndrome, acute myeloid leukemia, or any other prior malignancy with a few exceptions.
- * Participants must be treatment naïve at the mCRPC stage, eg, no cytotoxic chemotherapy, radio-ligand therapy (i.e. 177Lu- PSMA-617), CDK4/6 inhibitors, 5-alpha reductase inhibitors for prostate cancer in any setting, androgen receptor signaling inhibitors (ARSi) including enzalutamide, apalutamide, darolutamide, poly ADP-ribose polymerase (PARP) monotherapy or other systemic anti-cancer treatment with the following exceptions:

1. Treatment with first-generation antiandrogen (ADT) agents;
 2. Docetaxel treatment is allowed for mCSPC, as long as no signs of failure, or disease progression occurred during treatment or within 3 months of treatment completion.
- * Previous administration with an investigational product (drug or vaccine) within 30 days or 5 half-lives preceding the first dose of study intervention (whichever is longer).
 - * Inadequate organ function.

11. Study Identifiers & Governance

Primary ID: 680142559345727201

Registry Number: NCT06629779

Sponsor: Pfizer

Study Title: A Study to Learn How PF-06821497 (Mevrometostat) Works in Men With Metastatic Castration-resistant Prostate Cancer.
