

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A Randomized, Open-label, Parallel-group, Non-inferiority Study Comparing Efficacy, Safety, and Tolerability of Remibrutinib After Switching From Ocrelizumab in Participants Living With Relapsing Multiple Sclerosis, Followed by Open-label Treatment With Remibrutinib
Short Title:	Efficacy and Safety of Remibrutinib After Switching From Ocrelizumab in Participants Living With Relapsing Multiple Sclerosis.
Protocol Number:	72273127606077281
NCT Number:	NCT06846281
Sponsor Name:	Novartis
Investigational Product:	ocrelizumab
Phase:	PHASE3
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Annualized rate of new or enlarging T2 lesions_Core Part: Number of new/enlarging T2 lesions per year on MRI at month 24 (relative to baseline)
Secondary Obj.:	1. Participants with no evidence of disease activity-3 (NEDA-3)_Core Part 2. Number of adverse events (AEs) and serious adverse events (SAEs)_Core Part 3. Annualized rate of new or enlarging T2 lesions_Extension Part

2.2 Background & Rationale

The purpose of this Phase 3b study is to assess the efficacy, safety and tolerability of remibrutinib after switching from ocrelizumab and compared to continuous ocrelizumab treatment, in patients living with relapsing multiple sclerosis (plwRMS).

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE3, Status: RECRUITING
Target N:	360

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

- * Male or female aged 40 to 70 years (inclusive)
- * Diagnosis of RMS according to the 2017 McDonald diagnostic criteria
- * Treated with ocrelizumab according to routine clinical practice and at standard dose
- * Neurologically stable within 30 days

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

* Suitable to be switched to remibrutinib based on physician judgement or patient preference

Key Exclusion Criteria:

- * Diagnosis of primary progressive multiple sclerosis (PPMS) according to the revised 2017 McDonald criteria
- * History of clinically significant Central Nervous System disease or neurological disorders
- * History of confirmed Progressive Multifocal Leukoencephalopathy or neurological symptoms consistent
- * Active clinically significant systemic bacterial, viral, parasitic or fungal infections
- * Active, chronic disease of the immune system other than MS
- * Severe cardiac disease or significant findings on the ECG
- * Participant who is unable to undergo MRI scans
- * History of life-threatening infusion or injection reaction related to ocrelizumab

Other inclusion and exclusion criteria may apply

4.2 Exclusion Criteria

- * Diagnosis of primary progressive multiple sclerosis (PPMS) according to the revised 2017 McDonald criteria
- * History of clinically significant Central Nervous System disease or neurological disorders
- * History of confirmed Progressive Multifocal Leukoencephalopathy or neurological symptoms consistent
- * Active clinically significant systemic bacterial, viral, parasitic or fungal infections
- * Active, chronic disease of the immune system other than MS
- * Severe cardiac disease or significant findings on the ECG
- * Participant who is unable to undergo MRI scans
- * History of life-threatening infusion or injection reaction related to ocrelizumab

Other inclusion and exclusion criteria may apply

11. Study Identifiers & Governance

Primary ID: 72273127606077281

Registry Number: NCT06846281

Sponsor: Novartis

Study Title: Efficacy and Safety of Remibrutinib After Switching From Ocrelizumab in Participants Living With Relapsing Multiple Sclerosis.
