2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Composite of maximum left atrial volume index (LAVI) and left ventricular mass index (LVMI) at Week 48: Participants achieving both of the following criteria at Week 48 cardiac magnetic resonance imaging (CMR) assessment: * A decrease of at least 5 mL/m ² in maximum LAVI from baseline * A decrease of at least 5 g/m ² in LVMI from baseline
Secondary Obj.:	1. Proportion of participants who had at least 1 class of improvement from baseline in New York Heart Association (NYHA) class at Week 48 2. Change from baseline in maximum left atrial volume index (LAVI) at Week 48 3. Change from baseline in left ventricular mass index (LVMI) at Week 48

2.2 Background & Rationale

The purpose of this study is to evaluate the mavacamten impact on myocardial structure with cardiac magnetic resonance imaging (CMR) in adult participants with symptomatic obstructive hypertrophic cardiomyopathy (oHCM) \[New York Heart Association (NYHA) Functional Class II or III\].
