

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A Phase 3 Randomized, Double-blind, Multi-center Study of Adjuvant Nivolumab Versus Placebo in Subjects With High Risk Invasive Urothelial Carcinoma (CheckMate 274: CHECKpoint Pathway and nivoluMAb Clinical Trial Evaluation 274)
Short Title:	An Investigational Immuno-therapy Study of Nivolumab, Compared to Placebo, in Patients With Bladder or Upper Urinary Tract Cancer, Following Surgery to Remove the Cancer
Protocol Number:	265719595791392171
NCT Number:	NCT02632409
Sponsor Name:	Bristol Myers Squibb
Investigational Product:	nivolumab
Phase:	PHASE3
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Disease Free Survival (DFS): The time between the date of randomization and the date of first documented recurrence (local urothelial tract, local non-urothelial tract or distant), or death due to any cause, whichever occurs first. 2. Disease Free Survival (DFS) in PD-L1 Expression ? 1% Population: The time between the date of randomization and the date of first documented recurrence (local urothelial tract, local non-urothelial tract or distant), or death due to any cause, whichever occurs first.
Secondary Obj.:	1. Non-Urothelial Tract Recurrence Free Survival 2. Non-Urothelial Tract Recurrence Free Survival in PD-L1 Expression ? 1% Population 3. Overall Survival

2.2 Background & Rationale

The purpose of this study is to determine the effectiveness and safety of Nivolumab compared to placebo in participants who have undergone radical surgery for invasive urothelial cancer.

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE3, Status: ACTIVE_NOT_RECRUITING
Target N:	709

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

- * Must have had invasive urothelial cancer at high risk of recurrence originating in the bladder, ureter, or renal pelvis
- * Must have had radical surgical resection (e.g. radical cystectomy), performed within the last 120 days

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

- * Must have disease free status as determined by imaging within 4 weeks of dosing
- * Tumor tissue must be provided for biomarker analysis
- * Patients who have not received prior neoadjuvant cisplatin chemotherapy must be ineligible for or refuse cisplatin-based adjuvant chemotherapy

4.2 Exclusion Criteria

- * Partial bladder or partial kidney removal (eg, partial cystectomy or partial nephrectomy)
- * Secondary Treatment (eg, adjuvant systemic chemotherapy for bladder cancer) following surgical removal of bladder cancer
- * Subjects with active, known or suspected autoimmune disease
- * Prior malignancy active within the previous 3 years except for locally curable cancers that have been apparently cured
- * Condition requiring systemic treatment with either corticosteroids or other immunosuppressive medications within 14 day of study drug administration
- * Positive test for hepatitis B virus surface antigen (HBV s Ag) or hepatitis C virus ribonucleic acid (HCV antibody) indicating acute or chronic infection

11. Study Identifiers & Governance

Primary ID: 265719595791392171

Registry Number: NCT02632409

Sponsor: Bristol Myers Squibb

Study Title: An Investigational Immuno-therapy Study of Nivolumab, Compared to Placebo, in Patients With Bladder or Upper Urinary Tract Cancer, Following Surgery to Remove the Cancer

15. Sign-off & Approval
