

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A Phase 3, Randomized, Open-label, Study of Subcutaneous Nivolumab + Relatlimab Fixed-dose Combination Versus Intravenous Nivolumab + Relatlimab Fixed-dose Combination in Participants With Previously Untreated Metastatic or Unresectable Melanoma
Short Title:	A Study of Subcutaneous Nivolumab + Relatlimab Fixed-dose Combination (FDC) in Previously Untreated Metastatic or Unresectable Melanoma
Protocol Number:	31774509539330535
NCT Number:	NCT05625399
Sponsor Name:	Bristol Myers Squibb
Investigational Product:	nivolumab
Phase:	PHASE3
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Time-averaged serum concentration over 28 days after the first dose (Cavgd28) of Nivolumab 2. Trough serum concentration at steady state (Cminss) of Nivolumab 3. Cavgd28 of Relatlimab
Secondary Obj.:	1. Objective Response Rate (ORR) by Blinded Independent Central Review (BICR) per RECIST v1.1 2. Trough serum concentration at Day 28 after the first dose (Cmind28) of Nivolumab and Relatlimab 3. Peak serum concentration after the first dose (Cmax1) of Nivolumab and Relatlimab

2.2 Background & Rationale

The purpose of this study is to demonstrate that the study drug exposure level of the nivolumab + relatlimab FDC subcutaneous (SC) formulation is not worse than nivolumab + relatlimab FDC intravenous (IV) administration in participants with previously untreated metastatic or unresectable melanoma.

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE3, Status: ACTIVE_NOT_RECRUITING
Target N:	579

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

Not Provided

4.2 Exclusion Criteria
