

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A Phase 3, Open-label, Randomized Study to Compare the Efficacy and Safety of Luspatercept (ACE-536) vs Epoetin Alfa for the Treatment of Anemia Due to Revised International Prognostic Scoring System (IPSS-R) Very Low, Low, or Intermediate-Risk Myelodysplastic Syndrome (MDS) in Erythropoiesis-Stimulating Agent (ESA)-Naive Participants Who Are Non-Transfusion Dependent (NTD): The "ELEMENT-MDS" Trial
Short Title:	ELEMENT-MDS: A Study to Compare the Efficacy and Safety of Luspatercept in Participants With Myelodysplastic Syndrome (MDS) and Anemia Not Receiving Blood Transfusions
Protocol Number:	587143197471060742
NCT Number:	NCT05949684
Sponsor Name:	Bristol Myers Squibb
Investigational Product:	epoetin alfa
Phase:	PHASE3
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Number of participants with lower-risk non-transfusion dependent myelodysplastic syndromes (NTD-MDS) who converted to Transfusion Dependence (TD) during any continuous 16-week interval within the 96-week treatment period: TD is defined as ≥ 3 red blood cells (RBC) units/16 weeks assessed by International Working Group (IWG) 2018.
Secondary Obj.:	1. Number of participants with an increase from baseline in mean Hb values of ≥ 1.5 grams/deciliter (g/dL) in any continuous 16-week interval within the 48 week Treatment Period in the absence of transfusion 2. Number of participants with an increase from baseline in mean Hb values of ≥ 1.5 g/dL in any continuous 24-week interval within the 48-week and 96-week treatment period in the absence of transfusion 3. Number of participants with an increase from baseline in mean Hb values of ≥ 1.5 g/dL in any continuous 24-week interval within the 48-week and 96-week treatment period in the absence of transfusion

2.2 Background & Rationale

The purpose of the study is to compare the efficacy and safety of Luspatercept vs epoetin alfa in the treatment of anemia in adults due to IPSS-R very low, low, intermediate-risk MDS in ESA-naïve participants who are non-transfusion dependent (NTD).

3. Study Design & Methodology

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

Design Framework: Type: INTERVENTIONAL, Phase: PHASE3, Status: RECRUITING
Target N: 360

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

Not Provided

4.2 Exclusion Criteria

Not Provided

11. Study Identifiers & Governance

Primary ID: 587143197471060742
Registry Number: NCT05949684
Sponsor: Bristol Myers Squibb
Study Title: ELEMENT-MDS: A Study to Compare the Efficacy and Safety of Luspatercept in Participants With Myelodysplastic Syndrome (MDS) and Anemia Not Receiving Blood Transfusions

15. Sign-off & Approval
