2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Maintenance Treatment: Progression-Free Survival (PFS): PFS is defined as the time from randomization to the first documented progressive disease (PD) or death due to any cause, whichever occurs first as assessed by Response Criteria in Solid Tumors Version 1.1 (RECIST 1.1) as evaluated by the blinded independent central review (BICR). PD is defined as ≥20% increase in the sum of diameters of target lesions. In addition to the relative increase of 20%, the sum must also demonstrate an absolute increase of ≥5 mm. The appearance of one or more new lesions is also considered PD. 2. Maintenance Treatment: Overall Survival (OS): OS is defined as time from randomization to death due to any cause.
Secondary Obj.:	1. Maintenance Treatment: Progression-Free Survival 2 (PFS2) as Assessed by Investigator 2. Maintenance Treatment: Number of Participants Who Experience One or More Adverse Events (AEs) 3. Maintenance Treatment: Number of Participants Who Discontinue Study Intervention Due to an AE

2.2 Background & Rationale

Researchers are looking for new ways to treat people with proficient mismatch repair (pMMR) endometrial cancer (EC) that is advanced or recurrent.
