

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A Phase 3, Randomized, Open-Label Study of Nivolumab Combined With Cabozantinib Versus Sunitinib in Participants With Previously Untreated Advanced or Metastatic Renal Cell Carcinoma
Short Title:	A Study of Nivolumab Combined With Cabozantinib Compared to Sunitinib in Previously Untreated Advanced or Metastatic Renal Cell Carcinoma
Protocol Number:	806600574934296172
NCT Number:	NCT03141177
Sponsor Name:	Bristol Myers Squibb
Investigational Product:	sunitinib
Phase:	PHASE3
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Progression Free Survival (PFS): PFS is defined as the time from date of randomization to the first documented tumor progression date or death due to any cause, whichever occurs first based on BICR assessment using RECIST v1.1. Participants who die without a reported progression will be considered to have progressed on the date of their death. Participants who did not progress or die will be censored on the date of their last evaluable tumor assessment on or prior to initiation of subsequent anti-cancer therapy. Progressive disease (PD); 20% increase in the sum of diameters of target lesions, taking as reference the smallest sum on study
Secondary Obj.:	1. Overall Survival (OS) 2. Objective Response Rate (ORR) 3. Number of Participants Experiencing Adverse Events (AEs)

2.2 Background & Rationale

The purpose of this study is to determine whether Nivolumab Combined with Cabozantinib is safe and effective compared to Sunitinib in previously untreated advanced or metastatic renal cell carcinoma

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE3, Status: ACTIVE_NOT_RECRUITING
Target N:	701

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

* Histological confirmation of RCC with a clear-cell component, including participants who may also have sarcomatoid

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

features

- * Advanced (not amenable to curative surgery or radiation therapy) or metastatic (AJCC Stage IV) RCC
- * No prior systemic therapy for RCC with the following exception:

i) One prior adjuvant or neoadjuvant therapy for completely resectable RCC if such therapy did not include an agent that targets VEGF or VEGF receptors and if recurrence occurred at least 6 months after the last dose of adjuvant or neoadjuvant therapy

4.2 Exclusion Criteria

- * Any active CNS metastases
- * Any active, known or suspected autoimmune disease
- * Any condition requiring systemic treatment with either corticosteroids (> 10 mg daily prednisone equivalent) or other immunosuppressive medications within 14 days of randomization
- * Participants who have received a live/attenuated vaccine within 30 days of first treatment

Other protocol defined inclusion/exclusion criteria could apply

11. Study Identifiers & Governance

Primary ID:	806600574934296172
Registry Number:	NCT03141177
Sponsor:	Bristol Myers Squibb
Study Title:	A Study of Nivolumab Combined With Cabozantinib Compared to Sunitinib in Previously Untreated Advanced or Metastatic Renal Cell Carcinoma

15. Sign-off & Approval

Principal Investigator: _____	Date: _____
Clinical Operations Lead: _____	Date: _____
Lead Statistician: _____	Date: _____
