

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A Phase 3 Randomized, Open-label Clinical Study to Evaluate the Pharmacokinetics and Safety of Subcutaneous Pembrolizumab Coformulated With Hyaluronidase (MK-3475A) Versus Intravenous Pembrolizumab, in the First-line Treatment of Participants With Metastatic Non-small Cell Lung Cancer With PD-L1 TPS 50% or Greater
Short Title:	A Clinical Study of Pembrolizumab (+) Berahyaluronidase Alfa (MK-3475A) to Treat Newly-diagnosed Metastatic Non-small Cell Lung Cancer (MK-3475A-F84)
Protocol Number:	872663339818887016
NCT Number:	NCT06698042
Sponsor Name:	Merck
Investigational Product:	hyaluronidase
Phase:	PHASE3
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Area Under the Curve (AUC) of Pembrolizumab Measured After the First Dose: AUC is defined as area under curve exposure. Blood samples collected pre-dose and at multiple timepoints post-dose will be used to determine AUC. 2. Trough Concentration (Ctrough) of Pembrolizumab Measured at Steady State: Ctrough is defined as the trough concentration at steady-state. Blood samples collected pre-dose and at multiple timepoints post-dose will be used to determine Ctrough
Secondary Obj.:	1. Maximum Serum Concentration (Cmax) of Pembrolizumab Measured After the First Dose 2. Trough Concentration (Ctrough) of Pembrolizumab Measured After the First Dose 3. AUC of Pembrolizumab Measured at Steady State

2.2 Background & Rationale

Researchers are looking for new ways to treat non-small cell lung cancer (NSCLC) that is metastatic, which means cancer has spread to other parts of the body.

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE3, Status: RECRUITING
Target N:	160

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

- * Histologically or cytologically confirmed diagnosis of squamous or nonsquamous non-small cell lung cancer (NSCLC).
- * Measurable disease as assessed by the local site investigator/radiology.

4.2 Exclusion Criteria

- * Diagnosis of small cell lung cancer or, for mixed tumors, presence of small cell elements.
- * Received prior systemic anticancer therapy for their metastatic NSCLC.
- * Known additional malignancy that is progressing or has required active treatment within the past 3 years.
- * Known active central nervous system (CNS) metastases and/or carcinomatous meningitis.
- * Active autoimmune disease that has required systemic treatment in the past 2 years.
- * History of (noninfectious) pneumonitis/interstitial lung disease that required steroids or has current pneumonitis/interstitial lung disease.
- * Active infection requiring systemic therapy.

11. Study Identifiers & Governance

Primary ID: 872663339818887016

Registry Number: NCT06698042

Sponsor: Merck

Study Title: A Clinical Study of Pembrolizumab (+) Berahyaluronidase Alfa (MK-3475A) to Treat Newly-diagnosed Metastatic Non-small Cell Lung Cancer (MK-3475A-F84)

15. Sign-off & Approval

Principal Investigator: _____ Date: _____

Clinical Operations Lead: _____ Date: _____

Lead Statistician: _____ Date: _____
