

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A Phase 3, Randomized, Double-Blind Study of Adjuvant Immunotherapy With Nivolumab Versus Placebo After Complete Resection of Stage IIB/C Melanoma
Short Title:	Effectiveness Study of Nivolumab Compared to Placebo in Prevention of Recurrent Melanoma After Complete Resection of Stage IIB/C Melanoma
Protocol Number:	989169075546791966
NCT Number:	NCT04099251
Sponsor Name:	Bristol Myers Squibb
Investigational Product:	nivolumab
Phase:	PHASE3
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Recurrence Free Survival (RFS): Recurrence Free Survival (RFS) is defined as the time between the date of randomization and the date of first recurrence (local, regional or distant metastasis), new primary melanoma (including melanoma in situ), or death (whatever the cause), whichever occurs first. For participants who remain alive and whose disease has not recurred or did not die, RFS will be censored on the date of last evaluable disease assessment. For those participants who remained alive and had no recorded post-randomization tumor assessment, RFS will be censored on the day of randomization.
Secondary Obj.:	1. Distant Metastasis-Free Survival (DMFS) 2. Duration of Treatment on Next Line Therapy Per Investigator Assessment 3. Progression-Free Survival Through Next-Line Therapy

2.2 Background & Rationale

The purpose of this study is to determine the effectiveness of nivolumab adjuvant immunotherapy compared to placebo in adults and pediatric participants after complete resection of Stage IIB/C melanoma with no evidence of disease (NED) who are at high risk for recurrence.

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE3, Status: ACTIVE_NOT_RECRUITING
Target N:	790

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

- * Had a negative sentinel lymph node biopsy
- * Participant has not been previously treated for melanoma
- * ECOG 0 or 1
- * Participants must have been diagnosed with histologically confirmed, Resected, Stage IIB/C cutaneous melanoma

4.2 Exclusion Criteria

- * History of ocular or mucosal melanoma.
- * Pregnant or nursing women
- * Participants with active known or suspected autoimmune disease
- * Known history of allergy or hypersensitivity to study drug components
- * Prior treatment with an anti-PD-1, anti-PD-L1, anti-PD-L2, anti-CD137, anti-CTLA-4 antibody, or agents that target IL-2 pathways, T-cell stimulators, or checkpoint pathways

Other protocol defined inclusion/exclusion criteria apply.

11. Study Identifiers & Governance

Primary ID: 989169075546791966

Registry Number: NCT04099251

Sponsor: Bristol Myers Squibb

Study Title: Effectiveness Study of Nivolumab Compared to Placebo in Prevention of Recurrent Melanoma After Complete Resection of Stage IIB/C Melanoma

15. Sign-off & Approval

Principal Investigator: _____ Date: _____

Clinical Operations Lead: _____ Date: _____

Lead Statistician: _____ Date: _____
