2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Number of Participants With Treatment Emergent Adverse Events and Serious Adverse Events: An adverse event (AE) is any untoward medical occurrence (e.g. any unfavorable and unintended sign \[including abnormal laboratory findings\], symptom or disease) in a participant or clinical investigation participant after providing written informed consent for participation in the study. Therefore, an AE may or may not be temporally or causally associated with the use of a medicinal (investigational) product.
Secondary Obj.:	1. Number of Participants With Complete Remission According to International Working Group (IWG) for MDS (2006) With MBG453 (Sabatolimab) in Combination With HMAs (IV/SC/Oral) by 12 Months. 2. Number of Participants With Progression Free Survival - Death and Disease Progression 3. Progression Free Survival - 50th Percentile

2.2 Background & Rationale

The main objective of this study was to assess the safety profile of MBG453 (sabtolimab) in combination with FDA approved hypomethylating agents (HMAs) of investigator's choice (IV Decitabine or Azacitidine /SC Azacitidine /Oral Decitabine (cedazuridine combination (INQOVI))).
