

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A Phase II, Open-Label, Multicenter Study Evaluating the Safety and Efficacy of Neoadjuvant Treatment With Inavolisib Combinations in Patients With Untreated, Early-stage, PIK3CA-Mutated Breast Cancer
Short Title:	A Study to Test Inavolisib Treatments in Participants With Early-Stage, PIK3CA-Mutated Breast Cancer
Protocol Number:	670581411340092875
NCT Number:	NCT07054190
Sponsor Name:	Roche
Investigational Product:	letrozole
Phase:	PHASE2
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Percentage of Participants with Adverse Events (AEs)
Secondary Obj.:	1. Percentage of Participants with Total Pathological Complete Response (pCR) 2. Percentage of Participants with Objective Response Rate (ORR), According to Modified Response Evaluation Criteria in Solid Tumors, Version 1.1 (mRECIST v1.1) 3. Change From Baseline in Ki-67 Levels by Immunohistochemistry (IHC)

2.2 Background & Rationale

This study will evaluate the safety and efficacy of inavolisib combination therapies in participants with untreated, PIK3CA-mutated, Stage II-III, estrogen receptor (ER)-positive, Human Epidermal Growth Factor Receptor 2 (HER2)-negative breast cancer (BC).

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE2, Status: RECRUITING
Target N:	60

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

- * Histologically confirmed operable or inoperable invasive Stage II-III BC according to American Joint Committee on Cancer (AJCC) TNM staging classification
- * Candidate for neoadjuvant treatment and considered appropriate for endocrine combination therapy
- * Willingness to undergo breast surgery (mastectomy or breast-conserving surgery) after neoadjuvant treatment (unless inoperable)

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

- * Documented ER-positive tumor in accordance with current American Society of Clinical Oncology (ASCO)/College of American Pathologists (CAP) guidelines
- * Documented HER2-negative tumor in accordance with current ASCO/CAP guidelines
- * Documented Ki-67 score $\geq 5\%$ as per local assessment
- * Confirmed PIK3CA mutation

4.2 Exclusion Criteria

- * Stage IV (metastatic) BC
- * Inflammatory BC (cT4d)
- * Bilateral invasive BC
- * History of ductal carcinoma in situ or lobular carcinoma in situ if they have received any systemic therapy for treatment or radiation therapy to the ipsilateral breast
- * Previous systemic or local treatment for the primary BC currently under investigation (including excisional biopsy or any other surgery of the primary tumor and/or axillary lymph nodes, including sentinel lymph node biopsy, radiotherapy, cytotoxic, and endocrine treatments)
- * Type 2 diabetes requiring ongoing systemic treatment at the time of study entry; or any history of Type 1 diabetes

11. Study Identifiers & Governance

Primary ID: 670581411340092875

Registry Number: NCT07054190

Sponsor: Roche

Study Title: A Study to Test Inavolisib Treatments in Participants With Early-Stage, PIK3CA-Mutated Breast Cancer

15. Sign-off & Approval
