

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A Phase 2 Basket Study of Tucatinib in Combination With Trastuzumab in Subjects With Previously Treated, Locally Advanced Unresectable or Metastatic Solid Tumors Driven by HER2 Alterations
Short Title:	Basket Study of Tucatinib and Trastuzumab in Solid Tumors With HER2 Alterations
Protocol Number:	84171278297966800
NCT Number:	NCT04579380
Sponsor Name:	Pfizer
Investigational Product:	trastuzumab
Phase:	PHASE2
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Confirmed Objective Response Rate (cORR) as Assessed by Investigator: Confirmed ORR was defined as the percentage of participants with best overall response of complete response (CR) or partial response (PR) according to Response Evaluation Criteria in Solid Tumors (RECIST) criteria version (v)1.1 as assessed by investigator and was considered as confirmed when subsequent response was at least 4 weeks after initial response. As per RECIST v1.1, CR: disappearance of all target lesions. Any pathological lymph nodes (whether target or non-target) must have reduction in short axis to less than ($<$)10 millimeter (mm). PR: at least a greater than or equal to ($\geq$)30 % decrease in the sum of diameters (SOD) of target lesions (longest for non-nodal target lesions and the short axes for nodal target lesions), taking as reference the baseline sum diameters. Disease progression (PD): at least $\geq$ 20% relative increase in SOD of target lesion taking as reference the smallest sum on study (including baseline sum if that is the smallest on study).
Secondary Obj.:	1. Confirmed Disease Control Rate (DCR) as Assessed by Investigator 2. Duration of Response (DOR) as Assessed by Investigator 3. Progression-Free Survival (PFS) as Assessed by Investigator

2.2 Background & Rationale

This trial studies how well tucatinib works for solid tumors that make either more HER2 or a different type of HER2 than usual (HER2 alterations) The solid tumors studied in this trial have either spread to other parts of the body (metastatic) or cannot be removed completely with surgery (unresectable).

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE2, Status: ACTIVE_NOT_RECRUITING
-------------------	--

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

Target N: 217

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

Not Provided

4.2 Exclusion Criteria

Not Provided

11. Study Identifiers & Governance

Primary ID: 84171278297966800

Registry Number: NCT04579380

Sponsor: Pfizer

Study Title: Basket Study of Tucatinib and Trastuzumab in Solid Tumors With HER2 Alterations

15. Sign-off & Approval

Principal Investigator: _____ Date: _____

Clinical Operations Lead: _____ Date: _____

Lead Statistician: _____ Date: _____
