

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A Phase II Multi-center, Single Arm, Safety and Efficacy Study of MBG453 in Combination With Azacitidine and Venetoclax for the Treatment of Acute Myeloid Leukemia (AML) in Adult Patients Unfit for Chemotherapy
Short Title:	A Study of MBG453 in Combination With Azacitidine and Venetoclax in AML Patients Unfit for Chemotherapy
Protocol Number:	874617068820700877
NCT Number:	NCT04150029
Sponsor Name:	Novartis
Investigational Product:	azacitidine
Phase:	PHASE2
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Incidence of Dose Limiting Toxicities (DLT)(Safety run-in Patients Only): A dose-limiting toxicity (DLT) is defined as an adverse event or abnormal laboratory value considered by the Investigator to be at least possibly related to MBG453 as a single contributor or in combination with other component(s) of study treatment that occurs during the DLT observation period and meets any of the criteria as per protocol. 2. Percentage of Participants Achieving Complete Remission (CR) (CR Rate): CR rate is defined as the percentage of participants achieving a complete remission (CR) as per investigator assessment (based on IWG Cheson et al 2003, ELN 2017 Dohner et al 2017).
Secondary Obj.:	1. Measurable Residual Disease (MRD) - Negativity Rate: Full Study Population 2. Measurable Residual Disease (MRD) - Negativity Rate in Participants With Best Overall Response (BOR) of CR/CRi and Evaluable MRD 3. Duration of Complete Remission (CR)

2.2 Background & Rationale

This trial sought to extend the preliminary findings of efficacy by evaluating MBG453 in combination with hypomethylating agents (HMA) and also Bcl-2 inhibitor venetoclax.

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE2, Status: TERMINATED
Target N:	90

4. Subject Selection (Eligibility Criteria)

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

4.1 Inclusion Criteria

- * Signed informed consent must be obtained prior to participation in the study.
- * Age $\geq$ 18 years at the date of signing the informed consent form (ICF)
- * Newly diagnosed with AML based on 2016 WHO classification (Arber et al 2016) and not suitable for intensive chemotherapy defined as: age $\geq$ 75, ECOG performance Status 2 or 3, or any of the following comorbidities: severe cardiac comorbidities (including congestive heart failure, LVEF $\geq$ 50%, chronic stable Angina) , pulmonary comorbidity (DLCO $\geq$ 65% or FEV1 $\geq$ 65%). moderate hepatic impairment (with total Bilirubin >1.5 to $3 \times$ ULN) , renal impairment (eGFR $\geq$ 30 ml/min/1.73m² to <45 ml/min/1.73m²), or other comorbidity incompatible with intensive chemotherapy per Investigator assessment and approved by the Novartis Medical monitor)
- * Not planned for hematopoietic stem-cell transplantation (HSCT)
- * Eastern Cooperative Oncology Group (ECOG) performance status of 0, 1 , 2 or 3

4.2 Exclusion Criteria

- * Prior exposure to TIM-3 directed therapy
- * History of severe hypersensitivity reactions to any ingredient of study drug(s) (azacitidine, venetoclax or MGB453) or monoclonal antibodies (mAbs) and/or their excipients
- * Current use or use within 14 days prior to randomization of systemic, steroid therapy (> 10 mg/day prednisone or equivalent) or any immunosuppressive therapy. Topical, inhaled, nasal, ophthalmic steroids are allowed. Replacement therapy, steroids given in the context of a transfusion are allowed and not considered a form of systemic treatment.
- * Previous treatment at any time, with any of the following antineoplastic agents, approved or investigational; checkpoint inhibitors, venetoclax and hypomethylating agents (HMAs) such as decitabine or azacitidine.
- * Active autoimmune disease requiring systemic therapy (e.g.corticosteroids).
- * Live vaccine administered within 30 Days prior to randomization

11. Study Identifiers & Governance

Primary ID:	874617068820700877
Registry Number:	NCT04150029
Sponsor:	Novartis
Study Title:	A Study of MBG453 in Combination With Azacitidine and Venetoclax in AML Patients Unfit for Chemotherapy

15. Sign-off & Approval

Principal Investigator: _____ Date: _____
Clinical Operations Lead: _____ Date: _____
