

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A PHASE 2, MULTICENTER, RANDOMIZED, DOUBLE-BLIND, PLACEBO-CONTROLLED, 16-WEEK STUDY EVALUATING THE SAFETY AND EFFICACY OF RITLECITINIB (PF-06651600) IN ADULTS WITH MODERATE TO SEVERE HIDRADENITIS SUPPURATIVA
Short Title:	A 16-Week Study to Learn About the Study Medicine Called Ritlecitinib in Adults With Long Lasting Painful Red Skin Lumps, Known by the Medical Term, Hidradenitis Suppurativa, or HS.
Protocol Number:	965072330046414301
NCT Number:	NCT07228390
Sponsor Name:	Pfizer
Investigational Product:	ritlecitinib
Phase:	PHASE2
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Difference in proportion of responders based on Hidradenitis Suppurativa Clinical Response achieving at least 50% reduction from baseline (Hidradenitis Suppurativa Clinical Response HiSCR50) in patients with HS treated with ritlecitinib versus placebo.: The difference in proportion of responders based on HiSCR50 response at Week 16 in patients with HS treated with ritlecitinib versus placebo.
Secondary Obj.:	1. Proportion of participants achieving HiSCR50 response 2. Proportion of participants achieving HiSCR75 response 3. Proportion of participants achieving HiSCR90 response

2.2 Background & Rationale

The purpose of this study is to learn about the safety and effects of the study medicine (called Ritlecitinib) for the possible treatment of hidradenitis suppurativa (HS). HS is a disease causing long lasting painful red skin lumps.

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE2, Status: NOT_YET_RECRUITING
Target N:	240

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

1. Male or female participants ?18 to ?75 years of age.
2. Participants with a diagnosis (based on clinical history and physical examination) of moderate to severe HS for at

least 6 months prior to Screening Visit and inadequate response to at least 4-week (28 days) treatment with oral antibiotics for the treatment of HS.

4.2 Exclusion Criteria

1. Presence of ≥20 draining fistulae at Screening or BL visit
2. Evidence of other active skin disease or condition at screening
3. Have a known immunodeficiency disorder
4. Having a history of systemic infection requiring hospitalization or parenteral therapy, including history of infection with Mycobacterium TB
5. Specific Viral Infection History (incl. history of herpes zoster, HBV or HCV Infection)
6. Current or recent history of clinically significant severe, progressive, or uncontrolled other medical conditions
7. Any medical or psychiatric condition including any active suicidal ideation in the past year or suicidal behavior in the past 5 years

11. Study Identifiers & Governance

Primary ID:	965072330046414301
Registry Number:	NCT07228390
Sponsor:	Pfizer
Study Title:	A 16-Week Study to Learn About the Study Medicine Called Ritlecitinib in Adults With Long Lasting Painful Red Skin Lumps, Known by the Medical Term, Hidradenitis Suppurativa, or HS.

15. Sign-off & Approval
