

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A Phase 2, Randomized, Open-label, Controlled Study to Evaluate the Efficacy and Safety of Rapcabtagene Autoleucel Versus Comparator in Participants With Severe Refractory Idiopathic Inflammatory Myopathies (IIM)
Short Title:	Phase 2 Study of Rapcabtagene Autoleucel in Myositis
Protocol Number:	995831498411014951
NCT Number:	NCT06665256
Sponsor Name:	Novartis
Investigational Product:	ciltacabtagene autoleucel
Phase:	PHASE2
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Proportion of participants achieving at least moderate improvement in Total Improvement Score (TIS) at Week 52: The percentage of participants with a TIS of at least 40 at the 52nd week after the start of the study, corresponding to at least moderate improvement.
Secondary Obj.:	1. Adjusted annual cumulative glucocorticoid dose up to Week 52 2. Change from baseline in percent predicted Forced Vital Capacity (FVC%) at Week 52 3. Proportion of participants achieving major improvement in TIS at Week 52

2.2 Background & Rationale

A Phase 2, randomized, open-label, controlled study to evaluate the efficacy and safety of rapcabtagene autoleucel versus comparator in participants with severe refractory idiopathic inflammatory myopathies (IIM)

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE2, Status: RECRUITING
Target N:	123

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

- Men and women, aged >18 and <65 years, with a diagnosis of probable or definite myositis according to American College of Rheumatology/European League Against Rheumatism 2017 (ACR/EULAR 2017) criteria
- Participants who had inadequate response to prior therapy
- Diagnosed with active disease
- Participant must meet criteria for severe myositis

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

Key Exclusion Criteria:

1. Any condition during Screening that could prevent a complete washout of medications or could otherwise make the participant ineligible for anti-CD19 CAR-T therapy and further participation in the study
2. BMI at Screening of ≥ 18.5 or ≥ 35 kg/m²
3. Severe muscle damage at Screening
4. Inadequate organ function
5. Hypersensitivity and/or contraindications to any product (including its ingredients) to be given to the participant as per the study protocol
6. Other inflammatory and non-inflammatory myopathies
7. Any medical conditions that are not related to IIM that would jeopardize the ability of the participant to tolerate CD19 CAR-T cell therapy

Other protocol-defined inclusion/exclusion criteria may apply.

4.2 Exclusion Criteria

1. Any condition during Screening that could prevent a complete washout of medications or could otherwise make the participant ineligible for anti-CD19 CAR-T therapy and further participation in the study
2. BMI at Screening of ≥ 18.5 or ≥ 35 kg/m²
3. Severe muscle damage at Screening
4. Inadequate organ function
5. Hypersensitivity and/or contraindications to any product (including its ingredients) to be given to the participant as per the study protocol
6. Other inflammatory and non-inflammatory myopathies
7. Any medical conditions that are not related to IIM that would jeopardize the ability of the participant to tolerate CD19 CAR-T cell therapy

Other protocol-defined inclusion/exclusion criteria may apply.

11. Study Identifiers & Governance

Primary ID: 995831498411014951
Registry Number: NCT06665256
Sponsor: Novartis
Study Title: Phase 2 Study of Rapcabtagene Autoleucel in Myositis

15. Sign-off & Approval
