

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	An Open-Label, Multi-Drug, Biomarker-Directed, Multi-Centre Phase II Umbrella Study in Patients With Non-Small Cell Lung Cancer, Who Progressed on an Anti-PD-1/PD-L1 Containing Therapy (HUDSON).
Short Title:	Phase II Umbrella Study of Novel Anti-cancer Agents in Participants With NSCLC Who Progressed on an Anti-PD-1/PD-L1 Containing Therapy
Protocol Number:	164590701970941894
NCT Number:	NCT03334617
Sponsor Name:	AstraZeneca
Investigational Product:	cediranib
Phase:	PHASE2
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Percentage of Participants With Objective Response Per Response Evaluation Criteria in Solid Tumours Version 1.1 (RECIST v1.1): Objective response was defined as participants with a confirmed investigator-assessed response complete response (CR) or partial response (PR) based on RECIST v 1.1. The CR is defined as disappearance of all target (TL) and non-target lesions (NTL), and any pathological lymph node (whether target or nontarget) must have reduction in short axis to ≤ 10 mm. The PR is defined as at least a 30% decrease in the sum of the diameters of TLs, taking as reference the baseline sum diameters, as long as criteria for progressive disease (PD) are not met. Confirmation of CR and PR is required by a repeat, consecutive assessment no less than 4 weeks from date of first documentation. Percentage of participants with objective response was reported.
Secondary Obj.:	1. Overall Survival (OS) 2. Progression-Free Survival (PFS) Per RECIST v1.1 3. Best Percentage Change From Baseline in Tumour Size

2.2 Background & Rationale

This is an open-label, multi-centre, umbrella Phase II study in participants with metastatic NSCLC who have progressed on an anti-PD-1/PD-L1 containing therapy. This study is modular in design, allowing initial assessment of the efficacy, safety, and tolerability of multiple treatment arms.

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL, Phase: PHASE2, Status: ACTIVE_NOT_RECRUITING
Target N:	528

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

Not Provided

4.2 Exclusion Criteria

- * Participants whose tumour samples have targetable alterations in epidermal growth factor receptor (EGFR) and/or anaplastic lymphoma kinase (ALK) at initial diagnosis are excluded. In addition, participants whose tumour samples are known to have targetable alterations in ROS1, BRAF, MET or RET, are to be excluded.
- * Active or prior documented autoimmune or inflammatory disorders.
- * Active infection including tuberculosis, hepatitis B (known positive hepatitis B virus \[HBV\] surface antigen \[HBsAg\] result), hepatitis C, or human immunodeficiency virus (positive human immunodeficiency virus \[HIV\] 1/2 antibodies).
- * Female participant who are pregnant or breastfeeding, or male or female participants of reproductive potential who are not willing to employ effective birth control.
- * Known allergy or hypersensitivity to any of the study drugs or any of the study drug excipients, or history of severe hypersensitivity reactions to other monoclonal antibodies.
- * Participant has spinal cord compression or symptomatic brain metastases.
- * Any concurrent chemotherapy, immunotherapy, biologic or hormonal therapy for cancer treatment. Participants may receive treatment with bisphosphonates or receptor activator of nuclear factor kappa- γ ligand (RANKL) inhibitors for the treatment of bone metastases.
- * History of active primary immunodeficiency.

11. Study Identifiers & Governance

Primary ID:	164590701970941894
Registry Number:	NCT03334617
Sponsor:	AstraZeneca
Study Title:	Phase II Umbrella Study of Novel Anti-cancer Agents in Participants With NSCLC Who Progressed on an Anti-PD-1/PD-L1 Containing Therapy

15. Sign-off & Approval
