

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A Phase 1/2, Randomized, Double-Blind Trial of the Safety and Immunogenicity of a Multivalent Pneumococcal Conjugate Vaccine in Adults 18 Years of Age and Older
Short Title:	A Study to Learn About the Safety and Immune Response of a New Pneumococcal Vaccine in Adults
Protocol Number:	575532955283293815
NCT Number:	NCT06182124
Sponsor Name:	Pfizer
Investigational Product:	remifentanyl
Phase:	PHASE1, PHASE2
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Percentage of participants reporting prespecified local reactions within 7 days after vaccination: Prespecified local reactions (redness, swelling, and pain at the injection site) after vaccination 2. Percentage of participants reporting prespecified systemic events within 7 days after vaccination: Prespecified systemic events (fever, headache, fatigue, muscle pain, and joint pain) after vaccination 3. Percentage of participants reporting Adverse Events (AEs) within 1 month after vaccination: Adverse events occurring within 1 month after vaccination
Secondary Obj.:	1. Phase 1 (Stage 1) and Phase 2 (Stage 2) Only: Pneumococcal opsonophagocytic activity (OPA) geometric mean titers (GMTs)

2.2 Background & Rationale

The purpose of this study is to learn about the safety and immune effects of a pneumococcal vaccine in adults. This vaccine can possibly provide protection against further pneumococcal disease.

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL,	Phase: PHASE1, PHASE2,	Status: ACTIVE_NOT_RECRUITING
Target N:	558		

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

* Male or female participants ≥18 to <50 years of age (Stage 1) and ≥50 years of age (Stage 2, Stage 3, and Stage 4) at the time of consent

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

- * Adults determined by clinical assessment to be eligible for the study, including adults with preexisting stable disease within 12 weeks before receipt of study intervention
- * Participants willing to use acceptable contraception for at least 28 days after study intervention; female participants not of childbearing potential; male participants unable to father children
- * Phase 1 (Stage 1): Adults 18 through 49 years of age with no history of ever receiving a pneumococcal vaccine (ie, pneumococcal vaccine-naïve)
- * Phase 2 (Stages 2, 3, and 4): Adults ≥50 through 64 years of age with no history of ever receiving a pneumococcal vaccine (ie, pneumococcal vaccine-naïve) and adults 65 years of age and older with either no history of ever receiving a pneumococcal vaccine or who received PPSV23 ≥5 years prior to the first vaccination in this study (ie, experienced)

4.2 Exclusion Criteria

- * History of severe adverse reaction associated with a vaccine and/or severe allergic reaction to any component in pneumococcal conjugate vaccines and any other diphtheria toxoid-containing vaccine
- * Serious chronic disorder that in the investigator's opinion would make the participant inappropriate for entry into the study
- * Medical or psychiatric condition (recent or active suicidal ideation/behavior or laboratory abnormality) that may increase risk of study participation or make participant inappropriate for the study
- * Known or suspected immunodeficiency or other conditions associated with immunosuppression
- * Planned receipt of any licensed or investigational pneumococcal vaccine, or planned receipt of any licensed or investigational pneumococcal vaccine through study participation
- * Receipt of any inactivated or otherwise nonlive vaccine within 14 days or any live vaccine within 28 days before administration of study intervention

11. Study Identifiers & Governance

Primary ID: 575532955283293815

Registry Number: NCT06182124

Sponsor: Pfizer

Study Title: A Study to Learn About the Safety and Immune Response of a New Pneumococcal Vaccine in Adults

15. Sign-off & Approval

Principal Investigator: _____ Date: _____
