

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

1. Administrative & Study Identification

Full Study Title:	A Phase 1/2 Study of BMS-986449 Alone and in Combination With Nivolumab in Participants With Advanced Solid Tumors
Short Title:	A Study of BMS-986449 With and Without Nivolumab in Participants With Advanced Solid Tumors
Protocol Number:	578703125872769480
NCT Number:	NCT05888831
Sponsor Name:	Bristol Myers Squibb
Investigational Product:	nivolumab
Phase:	PHASE1, PHASE2
Medical Monitor:	[Not Provided in Posting]

2. Study Synopsis & Rationale

2.1 Study Objective

Primary Objective:	1. Number of participants with Dose-Limiting Toxicities (DLTs) 2. Number of participants with Adverse Events (AEs) 3. Number of participants with Serious Adverse Events (SAEs)
Secondary Obj.:	1. Maximum observed plasma concentration (Cmax) 2. Time of maximum observed concentration within a dosing interval (Tmax) 3. Area under the concentration-time curve within a dosing interval (AUC[TAU])

2.2 Background & Rationale

The purpose of this study is to evaluate the safety and efficacy of BMS-986449 alone and in combination with nivolumab in participants with advanced solid tumors.

3. Study Design & Methodology

Design Framework:	Type: INTERVENTIONAL,	Phase: PHASE1, PHASE2,	Status: ACTIVE_NOT_RECRUITING
Target N:	100		

4. Subject Selection (Eligibility Criteria)

4.1 Inclusion Criteria

* All participants must have a histologically or cytologically confirmed, advanced, unresectable/metastatic, solid malignancy (measurable by Response Evaluation Criteria in Solid Tumors \[RECIST\] v1.1), and have received, be refractory to, ineligible for, or intolerant of existing therapy(ies) known to provide clinical benefit for the condition of the participant.

Clinical Study Summary Report (CSSR)

Document Status: Final | Version: 1.0 | Date: 01-APR-2026

- * Part 1A may have a solid malignancy of any histology.
- * Part 1B is restricted to participants with Non-small cell lung cancer (NSCLC).
- * Part 1C is restricted to participants with Triple-negative breast cancer (TNBC).
- * Tumor biopsy must be obtained for all participants (unless medically precluded).

4.2 Exclusion Criteria

- * History of Grade ≥ 3 toxicity related to prior T-cell agonist or checkpoint inhibitor therapy (eg, anti-cytotoxic T-lymphocyte-associated antigen 4 [CTLA-4], or anti-PD-1/programmed death-ligand 1 [PD-L1] treatment, or any other antibody or drug specifically targeting T-cell co-stimulation or other immune checkpoint pathways) except those that are unlikely to re-occur with standard countermeasures.
- * Current or recent (within 3 months of study intervention administration) gastrointestinal disease or gastrointestinal surgery (eg, intestinal/gastric/colon resection) that could impact the absorption of study intervention.
- * Any significant acute or chronic medical illness which would interfere with study intervention or follow-up in the opinion of the investigator.

Other protocol-defined criteria may apply.

11. Study Identifiers & Governance

Primary ID: 578703125872769480

Registry Number: NCT05888831

Sponsor: Bristol Myers Squibb

Study Title: A Study of BMS-986449 With and Without Nivolumab in Participants With Advanced Solid Tumors

15. Sign-off & Approval
